DICTIONARY OF SPELLING AND PRONUNCIATION	101
HOMOPHONES	617

INTRODUCTION

PROVINCE OF THE DICTIONARY

The primary purpose of the lexicographer is to set forth the proper orthography, pronunciation, and definitions of the words of the language. The vast majority of persons who consult the dictionaries do so to determine questions of spelling and pronunciation much oftener than to learn the meanings of words. This is especially true of teachers and students in schools and colleges, of stenographers in professional and mercantile offices, and of business men in general.

COMPREHENSIVE VOCABULARY

By omitting definitions, and by a system of grouping which at the same time facilitates the speedy finding of the desired word, it has been made possible to bring within the compass of a single small volume a list of words almost as comprehensive and complete as that of the largest unabridged dictionaries.

SPELLING AND PRONUNCIATION

The standard authorities have been diligently compared, in order to determine the best spelling and pronunciation. In cases where several forms are in good current use, that which appears to have the greatest weight of authority has been placed first, with the variant form or forms following. All words whose pronunciation cannot be clearly and accurately set forth by the accepted orthography have been respelled to show the true pronunciation.

DIACRITICS

In the preparation of this volume, the special needs of English-speaking people and those who have a fair knowledge of the idiom of the language have been kept in view. Minor distinctions of vowel sounds, especially those occasioned by the absence of accent, have therefore been ignored. Many persons of culture, but without special training in phonetics, are in greater doubt after consulting the dictionary for pronunciation than they were before. Believing that the appearance of the printed word should be left as free as possible from foreign or extraneous signs and characters, the most limited use of diacritics consistent with the representation of the correct pronunciation of the word has been made, and only those signs that are in most general use have been selected.

SYLLABICATION AND ACCENT

Stenographers, students, business men—in short, nearly all who have occasion to write—are at times perplexed to know just where to divide a word at the end of a line. Every word of more than one syllable in the vocabulary has been divided into its syllables, and the accent properly placed. In long words, where the place of secondary accent is doubtful, it, too, has been noted.

GROUPING

In order to make it possible to include practically all the words of the most extensive unabridged dictionary within the compass of a convenient single volume, a system of grouping has been adopted which in nowise detracts from the fullest representation of the spelling and pronunciation of the words, and which, by bringing derivative and related words all under the eye at once, greatly speeds the finding of the word desired. In one of the unabridged dictionaries, the word *air*, with its related words, covers over ten columns, or nearly four pages. By grouping, these words are brought under the eye at one glance.

COMPOUND WORDS

In no other department of lexicography is there so much uncertainty as in the compounding of words. The authorities often differ with each other, and are sometimes inconsistent with themselves, their practice violating their own theories. In this volume, faithful endeavor has been made to represent the best current usage, showing what compounds are written without separation, as *breastplate*, *breastwork*, and what words should be separated by a hyphen, as *bold-faced*, *blear-eyed*. In all other cases, the words are written separately, as *bass viol*, *Bath brick*, *galvanic battery*.

CAPITALIZATION

Writers and proof-readers are much at variance in the use of capital letters. Several of the unabridged dictionaries begin all the words of the vocabulary list with capitals. The best current usage has been here set forth. All words in the vocabulary except those requiring capitals, begin with lower-case letters.

FOREIGN WORDS

Words and phrases from other languages, when first introduced into English and American books, newspapers, and magazines, are printed in italics to denote their foreign origin. In the course of time many of these, by frequent use, drop their foreign dress and become anglicized. All words and expressions in this volume that retain their foreign form and pronunciation, have been so indicated, and are italicized.

ENGLISH AND FOREIGN PLURALS

Not a little uncertainty attends the use of plurals of foreign and classical terms. In some cases, the English plural has entirely supplanted the foreign; in others, the English form is occasionally met with in the works of good writers, but the general practice is

largely in favor of the classic plural. In some instances, however, good usage is quite evenly divided. In the first case, only the English plural has been given; in the second, only the classical; and in the third, both forms are presented, placing first that which seems to have the greater weight of authority.

PROPER NAMES

The names of persons and places are found in alphabetic order in the body of the work. This arrangement avoids the necessity for two distinct vocabularies. When it is remembered that we have many adjectives derived from proper names, the advantages of the plan become doubly apparent.

OBSOLETE WORDS

All obsolete, obsolescent, and archaic forms have been omitted, so that the student will know that any word found in the vocabulary of this volume is in good and current use, the purpose having been to present a thoroughly up-to-date working hand-book, and not to collect the worn-out forms of a previous age.

ORTHOGRAPHY

The words of the English language being derived from various sources, differing greatly in form and spirit, it is not surprising that they present many anomalies in their spelling and pronunciation. The carelessness and indifference of the early writers and printers also contributed to the existing irregularities, so that by the time the language began to assume a distinctive form and structure of its own, the inconsistencies of its spelling and pronunciation had become so firmly fixed that it was found impossible immediately to change them. Gradual changes are slowly

going on, but the day when the English language shall become strictly phonetic—when we shall spell as we pronounce and pronounce as we spell—seems to be remote.

The old family name of Mainwaring has shown one hundred and thirty-one variations in spelling, all drawn from authorized documents. Even as late as Shakspeare's time, much indifference was manifest, his name being written in more than thirty ways, three or four of which are still in current use. The words *aerie*, *aery*, *airy*, *eyry*, *eyrie*, still found in general use, added to *airie*, *aiery*, *ayry*, *ayery*, *eyery*, *eyerie*, forms found in early modern English, will serve to show some of the irregularities and inconsistencies of English spelling.

Persons who in childhood are taught to follow a certain spelling, usually adhere to that form in later life, and are sometimes intolerant of any other. The advantage of having the latest and best standard, that the child may be started aright, needs no argument.

CAUSES OF DIFFICULTY IN SPELLING

"Language," says Professor March, "is what we speak." All articulate speech is made up of words. These spoken words, in turn, are composed of sounds. An articulate, or speech, sound is the simplest element of language.

A perfect alphabet demands that there shall be as many characters, or letters, as there are elementary sounds; that each sound shall be represented by its own particular letter, and by no other; and that each letter shall represent but one sound. With such an alphabet, there could be no difficulties in spelling nor in pronunciation.

The English alphabet contains twenty-six letters. These are made to represent at least forty-seven English sounds. Three of the letters (*c*, *q*, and *x*) have no distinctive function, but repeat sounds represented by other letters or combinations of letters. This reduces the actual working force of the alphabet to twenty-three characters, giving an average of two sounds to each character. The work, however, is not so evenly divided. The five

letters called vowels are made to bear a large part of the burden, representing no fewer than eighteen separate sounds. The consonants, too, are often used interchangeably, one sound being represented by several characters.

CLASSIFICATION OF THE LETTERS

The letters of the alphabet are divided into vowels and consonants. The vowels are *a, e, i, o, u*, and represent open vocalized sounds, with but slight obstruction in the emission of the breath. The remaining letters are called consonants. The term *consonant* seems to imply that this class of letters can be used only with vowels to form syllables; but *l* and *n* frequently represent spoken syllables without a sonant vowel. Some grammarians add *w* and *y* to the list of vowels. Strictly speaking, these are never vowels. The former often combines with *e* to represent one of the sounds of *u* (*new, pew*), and with *a* to represent one of the sounds of that letter (*saw*), and with *o* to represent long *o* (*snow*), or the diphthong *ou* (*cow*). The letter *y* is often used as a substitute for *i* (*my, happy, myrtle*), but its distinctive office is purely consonantal.

DIGRAPHS AND TRIGRAPHS

The union of two letters to represent one sound is called a digraph, and of three letters, a trigraph. The letters may be either vowels or consonants; as, *ai* in *maid*; *ch* in *chin*; *eau* in *beau*; *sch* in *schist*.

RULES FOR SPELLING

The best spellers are those that spell by sight rather than by rule. Many of the rules for spelling are so obvious as to require no statement, while others are attended with so many exceptions as to render the rule almost useless. Only the most important and helpful rules are here given.

DERIVATIVES

Words ending in c take k before derivative terminations beginning with *e, i, or y*; as, *traffic, -ficked, -ficking*.

The final consonant is doubled in forming derivatives beginning with a vowel, in the case of monosyllables and accented syllables ending in a single consonant (except *h* or *x*); as *plan*, *planned*, *-ning*; *begin*, *-ner*, *-ning*. Cases in which the vowel is preceded by *qu* (as *squat*, *-ted*, *-ting*; *acquit*, *-ted*, *-ter*, *-ting*) form no exception, as the *u* has the sound of *w*.

The final consonant is not doubled (1) when it is preceded by a vowel digraph (*need*, *-ed*, *-ing*; *repeat*, *-er*, *ing*); (2) when the accent falls elsewhere than on the last syllable (*profit*, *-ed*, *-ing*); (3) when the word ends in two different consonants (*affirm*, *-ing*, *-er*).

Words of two or more syllables ending chiefly in *l*, with the accent on a syllable other than the last, according to the preceding rule, do not double the final consonant in taking a derivative beginning with a vowel: *apparel*, *bevel*, *cancel*, *carol*, *chisel*, *counsel*, *duel*, *equal*, *imperial*, *label*, *level*, *libel*, *marshal*, *model*, *parallel*, *pencil*, *quarrel*, *revel*, *shovel*, *shrivel*, *travel*, *worship*. While the dictionaries are greatly at variance on this point, the International, the Century, and the Standard conform to the rule by giving the single consonant the first place, and the double consonant the second.

Words ending in silent *e*, whose derivative forms begin with a consonant, retain the *e*; as, *hate-ful*, *move-ment*. The most important exceptions are words ending in *ge*, *judg-ment*, *acknowledg-ment*, *abridg-ment*, *lodg-ment*. The *e* in these words is retained by some authorities as a variant. When the *e* is immediately preceded by another vowel, it is usually dropped, as, *true*, *tru-ly*, *argue*, *argu-ment*.

Words ending in silent *e*, when forming derivatives beginning with a vowel, drop the *e*; as, *bridal*, *guidance*, *hoping*, *coming*. As a safeguard against mispronunciation and confusion, it is in some cases retained; as, *hoeing*, *toeing*, *shoeing*, *singeing*, *tingeing*, *springeing*, *dyeing*, *mileage*. To preserve the soft *c* or *g*, it is retained in *peaceable*, *noticeable*, *manageable*, *changeable*, *advantageous*, *outrageous*.

Words ending in ie not only drop *e* upon adding *ing*, but change *i* to *y* to prevent two *i*'s coming together; as, *dying*, *lying*, *vying*. Usage is divided in regard to *hying* (*hie-ing*).

Words ending in y preceded by a consonant, change *y* to *i* in taking an additional syllable beginning with a letter other than *i*; as, *icy*, *iciest*, *icily*, *tidy*, *tidiness*. Adjectives of one syllable in which *y* is preceded by a single consonant, usually retain *y*; as, *dryly*, *shyness*. *Drier* and *driest* are commonly written with *i*. Before the derivative suffixes *-like* and *-ship*, the *y* is retained.

Words ending in y preceded by a vowel, retain the *y* in the formation of derivatives; as, *prayed*, *obeying*, *enjoyed*. The common words *daily*, *laid*, *paid*, *said*, *saith*, *slain*, are exceptions. *Staid* or *stayed*, *gaily* or *gayly*, *gaiety* or *gayety*, are variable forms.

Words ending with a vowel sound retain the letters representing that sound when appending one or more syllables to form a derivative; as, *agree*, *-ing*, *-able*; *weigh*, *-ing*; *echo*, *-ed*, *-ing*. The third person, singular, present tense forms of verbs ending in *oo* do not add *e*; as, *coos*, *woos*, *shampoos*, *taboos*; but add it in the past tense and other forms; as, *cooed*, *wooed*, *wooper*.

Words ending in a double consonant usually retain both consonants on adding a prefix; as, *call*, *recall*, *tell*, *foretell*, *roll*, *enroll*. The weight of authority is in favor of the single *l* in *fulfil*, *instil*.

PLURALS

The plural of nouns is regularly formed by adding *s* to the singular. When the terminal sound is such that *s*, whether representing its own sound or that of *z*, will not combine with it, *es* is added; as, *churches*, *classes*. *Cantos*, *cameos*, *punctilios*, *rabbis*, *alkalis*, are regular. While *s* (with the sound of *z*) will readily unite with the following words, usage sanctions the *es* termination; as, *echoes*, *cargoes*, *embargoes*, *mottoes*, *potatoes*. *Alkalies* and *rabbies* are variants. Letters, figures, signs, etc., are pluralized by adding *s* with an apostrophe prefixed; as, *Mind your p's and q's*; *His 3's and 5's are well made*; *He ignores the why's and wherefore's*. Some good writers omit the apostrophe; as, *I have considered the pros and cons*.

The plural of nouns ending in y preceded by a consonant, is formed by adding *es*, the *y* first being changed into *i*; as, *skies*, *ladies*, *colloquies*. The letter *u* in the last instance has the force of the consonant *w*. Proper nouns add only *s*; as, *Marys*, *Dorothys*, *Timothys*. Some writers use the form *Maries* as the plural of *Mary*, but this is apt to confound it with the plural of *Marie*, and should be discouraged. When the singular ends in *y* preceded by a vowel, the plural is regularly formed by adding *s*; as, *days*, *keys*, *moneys*, *monkeys*, *attorneys*. The forms *monies*, *attornies*, *vallies*, should be discouraged.

The plural of the following nouns ending in f, is formed by changing *f* or *fe* into *v*, and adding *es*: *bee**f*, *cal**f*, *el**f*, *hal**f*, *lea**f*, *loa**f*, *sel**f*, *shea**f*, *shel**f*, *thie**f*, *wol**f*, *kni**f**e*, *li**f**e*, *wi**f**e*. Other nouns ending in *f* or *fe* form their plurals regularly: *hoofs*, *roofs*, *stripes*, *safes*, *chiefs*. The plural of *staff* is *staffs* or *staves*, according to its meaning.

The plural of nouns compounded with and ending in *-man* is *-men*; as, *firemen*, *workmen*. The following are not compounded, but form their plurals regularly: *Germans*, *Mussulmans*, *Ottomans*, *Turcomans*, *caymans*, *desmans*, *firmsans*, *talismans*.

The irregular plural formations of the common words *man*, *men*,—*foot*, *feet*,—*goose*, *geese*, are sufficiently well known to require no discussion, but *mongoose*, *mongooses*, *Mr.*, *Messrs.*, *Mrs.*, *Mesdames*, are not so well understood. *Bedouin*, *cannon*, *heathen*, are alike in both numbers. *Ethics*, *optics*, *news*, *politics*, and *means* (in the sense of agency) are plural in form, but, as nominatives, require verbs in the singular. The words *wages*, *aborigines*, *antipodes*, *pains*, and *literati*, take verbs in the plural.

The words *brother*, *die*, *pea*, *penny*, *staff*, have each two plurals, according to the meaning.

Many nouns from other languages have an English, as well as a foreign, plural: *beaus*, *beaux*; *formulas*, *formulæ*; *indexes*, *indices*; *bandits*, *banditti*; *cherubs*, *cherubim*; *seraphs*, *seraphim*. The English plurals are now generally preferred.

Some nouns have the same form in both numbers: *deer*, *sheep*,

swine, grouse, trout, Chinese, Portuguese, Tyrolese, Japanese. Collectively, *fish* and *fowl* are plural; as individuals, *fishes* and *fowls* are the plural forms.

In certain loosely-formed hyphenated compounds, the principal word is pluralized: *courts-martial, cousins-german, knights-errant, sons-in-law*. In close compounds ending in *-ful*, the plural is formed regularly; as, *handfuls, cupfuls, spoonfuls*.

The terminations -able and -ible cause much confusion in spelling. Those adjectives from Latin words ending in *-abilis*, as well as those of English origin, take the termination *-able*, and comprise much the larger number; as, *mutable, potable, eatable, laughable*, etc. Those derived from Latin words ending in *-ibilis*, take the termination *-ible*; as, *credible, vendible, legible*. The derivative forms, as, *accessible, -ibly, -ibility, inaccessible*, etc., follow the same rule. The following short list of *-ible* terminations comprises nearly all in ordinary use. Any words not found in this list may reasonably be supposed to end in *-able*:

accessible,	convertible,	docible,	frangible,	possible,
admissible,	convincible,	edible,	fusible,	producible,
appetible,	corrigible,	effectible,	gullible,	reducible,
apprehensible,	corrosible,	eligible,	horrible,	reflexible,
audible,	corruptible,	eludible,	intelligible,	reprehensible,
cessible,	credible,	enforcible,	irascible,	resistible,
coercible,	decoctible,	evincible,	legible,	responsible,
collectible,	deducible,	expansible,	miscible,	reversible,
compatible,	defeasible,	expressible,	negligible,	revertible,
competible,	defensible,	extendible,	partible,	risible,
comprehensible,	descendible,	extensible,	passible,	seducible,
compressible,	destructible,	fallible,	perceptible,	sensible,
conceptible,	digestible,	feasible,	permissible,	tangible,
contemptible,	discernible,	fencible,	persuasible,	terrible,
contractible,	distinguishible,	flexible,	pervertible,	transmissible,
controvertible,	divisible,	forcible,	plausible,	visible.

Derivatives from these, as, *inaccessible, infallible, illegible*, etc., also end in *-ible*.

Passible and *impassible* must be distinguished from *passable* and *impassable*,—words of different meaning.

The initial syllables em-, en-, and in- are now more definitely used than formerly. The words: *embitter, embosom, enclasp, engulf, ensnare, inclose, inquire, instil, instruct, intrust*, and a few

others, still show considerable diversity of spelling. The forms having the greater weight of authority have been given in the vocabulary.

The chief points of difference between British and American spelling relate to the endings *-our* and *-ise*. The American dictionaries are, for the most part, agreed in the use of *-or*, instead of *-our*; and *-ize*, instead of *-ise*. Webster writes *Savior*, *glamour*, but prefers *enamor*; the Century, Standard, and Worcester, write: *Saviour*, and prefer *enamour*, *glamour*. With these two exceptions (*enamour*, *glamour*), the American standards agree in the suppression of the *u*.

To avoid the unsightly repetition of the *ou* digraph, many British authorities write *clamorous*, *humorous*, *laborious*, instead of *clamourous*, *humourous*, *labourious*.

While the American standards employ *-ize* in preference to the English termination *-ise*, in most words having this termination, they are generally agreed in retaining *-ise* in:

advertise,	comprise,	emprise,	improvise,	premise,
advise,	compromise,	enterprise,	incise,	reprise,
apprise (to in-	demise,	excise,	mainprise,	revise,
form),	despise,	exercise,	manumise,	surmise,
chastise,	devise,	franchise	merchandise,	surprise.
circumcise,	disguise,	(af-, dis-, en-),		

The forms *catechise*, *criticise*, *exorcise*, are still in good use, with a growing preference for *catechize*, *criticize*, *exorcize*.

There is an increasing tendency to suppress silent *e* in *-ine* terminations, especially in the use of medical and chemical terms. The Century and the Standard dictionaries and the latest edition of Gould's Dictionary of Medicine represent the improved spelling, and the American Association for the Advancement of Science has recommended the new form. The words *chlorin*, *dentin*, *gelatin*, *glycerin*, *paraffin*, *ptyalin*, illustrate the new principle. Many chemical terms like *chloride*, *oxide*, etc., are now often correctly written *chlorid*, *oxid*.

Words ending in *-er* and *-or* occasion some confusion. The *-or* terminations constitute the larger number. No satisfactory

principle of discrimination has been formulated. Nearly all terms of this class pertaining to the legal profession end in *-or*. as: *abettor, acceptor, covenantor, debtor, executor, guarantor, juror, lessor, mortgagor or mortgageor*.

The ending *-er* is generally preferred to *-re*; as in *theater, center*. To preserve the proper sound of *c* and *g*, the *-re* termination is retained in *acre, chancre, lucre, massacre, ogre*.

Words ending in *-cion, -sion, and -tion* form a large list, and are often misspelled. Those which, in their shortest form, end in *-d, -de, -ge, -mit, -rt, -se, -ss*, usually take *-sion*. Most of the others end in *-tion*; a few in *-cion*.

The letters *l, f, and s, preceded by a single vowel*, are doubled at the end of a monosyllable: *ball, will, bluff, cliff, class, dress*. Exceptions: *clef, if, of, as, gas, has, is, pus, this, thus, was, us, yes*. The rule does not apply to *s* when used to form the possessive case or the plural; as, *boy's, boys*.

Consonants other than *l, f, s*, are rarely doubled at the end of a monosyllable. The exceptions are: *abb, ebb, add, odd, rudd, egg, lamm, mumm, bunn or bun, inn, burr or bur, err, murr, parr, purr or pur, shirr, butt, buzz, juzz*.

No definite rule for the spelling of words ending in *-ance, -ancy, -ant*, and of those ending in *-ence, -ency, -ent*, can be formulated. The idea of action or agency more generally pervades the former, and the idea of state or being, the latter; as, *servant, aspirant, assistant, confidant; diligent, patient, confident; defiance, resistance; excellence, confidence; buoyancy, corpulency, solvency*. The noun and adjective forms are usually in accord. If in doubt whether *transcendent* is spelled with *-ant* or *-ent*, the student may remember one of the noun forms, *transcendancy, transcendence*, and this will serve to remove the doubt respecting the adjective.

The termination *-ense* is preferred to *-ence* in *defense, offense, pretense*, on the ground that *defensive, offensive, pretension*, take the *s*. The words *expense, license, recompense*, formerly spelled with *c*, have entirely dropped the old form.

O AND OH

These exclamations are often used interchangeably by careless writers. It is better to limit O to an address in the vocative, with the exclamation point at the end of the phrase, as, O my friends! It is also used as an ejaculative expression of desire or regret, as, O that I had wings like a dove! O that I should live to see this day! In trivial and colloquial speech, O is employed, as, O my! O dear! O fie! O George! O Mary!

Oh is used to denote pain or woe, or sudden emotion. Except at the beginning of a sentence, it properly takes a lower-case letter; as, She is in her grave, and oh! the difference to me.

FOREIGN WORDS

Many foreign words, like depot, debut, debris, have become so thoroughly a part of the English language as to require no accent over the vowel.

CONTRACTIONS

Abbreviated forms of spelling, as, w^h, y^e, hon^{ble}, judgmt, once very common, especially in epistolary writing, are no longer used. In dictionaries and gazetteers; in treatises on botany, chemistry, and mathematics; in commercial tables and trades lists; and in foot-notes or very narrow columns, letters, figures, signs, and other characters are admissible, but in books, magazines, and newspapers, and in copy for the printer, as well as in ordinary correspondence, the word should be written in full. In formal legal documents, and in notes and cards for social occasions, even the day, the month, and the year are now spelled out.

The abbreviations Mr., Mrs., Messrs., Jr. or Jun., Sr. or Sen., are exceptions to the general rule. These are rarely spelled out in full; but Hon., Rev., Gen., Capt., Col., Maj., while often found in newspapers, should not be seen in books, nor in letters of a formal character. This is also true of ult., prox., and inst.

While e.g., i.e., q.v., viz., etc., may be allowed where space is limited, as in foot- or side-notes, they should be avoided in the body of the text as far as possible. Instead of the *, †, ||, §, and other marks of reference, small letters or figures are now employed by the best writers and printers, and are placed above and to the right of the word or phrase in question. The ampersand (&) is authorized in the business name of a firm or corporation, as in George W. Jacobs & Co., The Baltimore & Ohio Railroad Co., but in the text of standard books, the words are printed in full, as, Delaware and Hudson Railroad Company.

Dialect, slang, and colloquial expressions often give piquancy to a story, and may be tolerated in conversation and light description, but should not be encouraged. Ain't, hain't, are of bad form and should be avoided. Some authorities space the letters to suggest the separation between words, as, 't was, 't is, 't was n't, but most publishing houses close up the spaces. The object of abbreviation is to save space. The proper abbreviation for Pennsylvania is Pa., and for Philadelphia, Phila. The longer forms, Penn. or Penn'a, and Philada., are needless, and should be avoided.

Abbreviations like Fig. 1 or E.g. at the beginning of a sentence, even in a foot-note, are unsightly and should be avoided, although they may be perfectly admissible in the body or at the end of the sentence. In catalogues and tabulated lists, 4to, 8vo, 12mo, are used, but should never begin a sentence and should not be followed by a period.

THE DIERESIS

To prevent a combination of two vowels that must be sounded separately a dieresis is placed over the second, as, coöperate, reëlect, præmption. If at the end of a line the first vowel is separated from the second by a hyphen, the dieresis is omitted. The hyphen is sometimes employed in other situations instead of the dieresis.

SPELLING REFORM

Among alphabetical languages the English is conceded to be the most irregular and inconsistent in its orthography. Repeated efforts have been made to correct it, but until the subject was taken in hand by the Philological Society of England and the American Philological Association, but little progress had been made.

In 1876 an International Convention for the Amendment of English Orthography was held in Philadelphia. In 1892 the Modern Language Association of America united with the Philological Societies in this movement. About 3500 words are recommended for change. The following ten rules are specially recommended by these learned bodies for general adoption:

e. Drop silent *e* when fonetically useless, as in *liv, singl, eatn, raind*. Write *er* for *re* in *theater*.

ea. Drop *a* from *ea* having the sound of short *e*, as in *fether, lether*.

o. For *o* having the sound of *u* in *but*, write *u* as in *abuv, tung*.

ou. Drop *o* from *ou* having the sound of short *u*, as in *trubl, ruf*.

For *-our* write *-or*, as in *honor, labor*.

u, ue. Drop silent *u* after *g* before *a*, and also before *e* in native English words; and drop final *ue*: *gard, gest, catalog, leag*.

Dubl consonants may be simplified when fonetically useless: *bailif, batt, writn, traveler*, but not in words like *hall, call*.

d. Change *d* and *ed* final to *t* when so pronounced, as in *lookt, etc.*, unless the *e* affects the preceding sound, as in *chafed*.

gh, ph. Change *gh* and *ph* to *f* when so sounded, as in *enough, laughter, phonetic* (enuf, lafter, fonetic).

s. Change *s* to *z* when so sounded, especially in distinctive words and in *-ise*: *abuze, advertize*.

t. Drop *t* in *tch*: *catch, pitch* (cach, pich).

PRONUNCIATION

STANDARD OF PRONUNCIATION

The ultimate standard of pronunciation is the usage of the most cultured people to whom the language is vernacular. It is the province of the lexicographer to set forth this usage. The dictionary, therefore, becomes practically the standard. As usage is variable, it is not surprising that the dictionaries show much variety. The wonder is that they accord as fully as they do.

It is to be regretted that in England and America there is not some governing board or court of arbitration, something like the French Academy, to which all questions of disputed spelling and pronunciation might be referred for decision. The nearest approach to such an authoritative body is the Board appointed to determine the form of spelling of geographical names to be employed in the Government printing establishment.

There is no good reason why one standard should not serve for all the English-speaking nations throughout the world. The closer commercial relations and the increasing social intercourse between England and America make it the more desirable. While to Americans it would seem like taking a step backward to write *waggon*, *labour*, *emphasise*, and other variant spellings, to England, as the mother country, it would doubtless seem humiliating to conform to American usage. If perfect uniformity on all points of difference in spelling and pronunciation, not only between England and America, but among the American standards themselves, could be secured, scarcely any sacrifice would be too great.

In the present volume we can hope to present only the best current usage in the United States, as represented by Webster (The International), Worcester, The Century, and the Standard.

ELEMENTARY SOUNDS

The following is a table of the elementary sounds of the English language, with the diacritics employed in this volume to represent them.

VOWEL SOUNDS

VOCALS

1. **ă**, at, apple, man, called short a.
2. **ā**, ate, able, made, called long a.
3. **â**, air, care, bear, called coalescent a.
4. **ä**, arm, far, alms, called Italian a.
5. **ā**, all, haul, saw, called broad a.
6. **â**, ask, pass, chance, called intermediate a.
7. **á**, abide, disavow, flora, called obscure a.
8. **ě**, end, met, compel, called short e.
9. **ē**, evil, veto, predict, called long e.
10. **ê**, err, term, permit, called coalescent e.
11. **ĭ**, ill, mint, incur, called short i.
12. **ī**, ice, find, pirate, called long i.
13. **ǒ**, on, lot, offend, called short o.
14. **ō**, old, home, obey, called long o.
15. **ô**, orb, form, forlorn, called coalescent o.
16. **ŭ**, up, hunt, undone, called short u.
17. **ū**, use, fume, humane, called long u.
18. **û**, urn, curb, purloin, called coalescent u.
19. **ǒǒ**, foot, book, hoodwink, called short oo.
20. **ōō**, ooze, noon, moonlight, called long oo.
21. **oi**, oil, coin, foible.
22. **ou**, out, proud, sounding.

CONSONANT SOUNDS

SUBVOCALS

23. **b**, boy.
24. **d**, did.
25. **g**, gay.
26. **j**, judge.
27. **l**, land.
28. **m**, men.
29. **n**, now.
30. **r**, rest.
31. **v**, vine.
32. **w**, wing.
33. **y**, yes.
34. **z**, zone.
35. **zh**, azure.
36. **th**, than.
37. **ng**, song.

CONSONANT SOUNDS

ASPIRATES

- | | |
|----------------------|-----------------------|
| 38. f , fair. | 43. t , tan. |
| 39. h , hat. | 44. ch , chin. |
| 40. k , kind. | 45. sh , shun. |
| 41. p , pen. | 46. th , thin. |
| 42. s , sun. | 47. wh , what. |

UNUSUAL SOUNDS

48. **ch**, Bach.
49. **ñ**, baton.
50. **ü**, etude.
51. **ŋ**, ink.

DIACRITICAL MARKS

The diacritics employed in the volume are: the macron, \bar{a} , \bar{e} , \bar{i} , \bar{o} , \bar{u} , $\bar{\sigma}$, used to indicate the long-vowel sounds; the breve, \acute{a} , \acute{e} , \acute{i} , \acute{o} , \acute{u} , $\acute{\sigma}$, indicating the short vowels; the caret, \hat{a} , \hat{e} , \hat{o} , \hat{u} , designating the coalescents, and showing their blending with the sound of *r*; the dieresis, \ddot{a} , \ddot{u} , placed over the *a* to show what is generally called the sound of Italian *a*, and under to indicate the sound of broad *a*, and over *u* to represent French *u*; the obelisk, \hat{a} , to represent intermediate *a*; and the period, \dot{a} , \dot{n} , \dot{r} , to represent obscure *a*, the French *n*, and the nasal *n*, sounding like *ng*. The only other marked letters are the vocal **th** and the German **ch**.

LETTERS AND SOUNDS

It is unfortunate that the sounds and the letters that represent them are, by most persons, called by the same names, vowels and consonants. It were better to limit these terms to the characters, and find other names for the sounds, as is done by writers on phonetics and by teachers of elocution. The vowel sounds are uttered with the least obstruction or modification of the voice. They are sometimes called vocals, or tonics (tone sounds). In the utterance of the consonant sounds there is a wide range from the vowel-like openness of *l* and *r*, to the constricted mouth and throat positions for *m*, *p*, *t*, *g*, *k*, *th*. These sounds readily divide themselves into two classes, the first having a measure of vocality, and the second consisting of unvocalized breath. The former are called subvocals, or subtonics; the latter, aspirates, or atonics.

DIPHTHONGS AND TRIPHTHONGS

The terms diphthong and triphthong should be restricted to the sounds represented by the vowel digraphs and trigraphs. Every vowel sound which, in its utterance, requires a change of mouth position, is diphthongal. A diphthong is defined as the union of two vowel sounds pronounced in one syllable; a triphthong as the union of three vowel sounds in one syllable. The confounding

of the terms diphthong and digraph, as well as triphthong and trigraph, has led to the mistaken notion that two characters are necessary to represent the diphthong, and three characters to represent the triphthong. The vowel characters *i* and *u* (high, Hugh) represent, singly, the union of two sounds, and, therefore, they are diphthongs as truly as are the sounds represented by the digraphs *oi* and *ou*. Long *a* and *o* (pay, no) are also diphthongal, although less so than *i* and *u*. The classical digraphs *æ* and *œ*, generally, but improperly, called diphthongs, are being rapidly displaced by the simple letter *e*, whose single sound, long or short, they represent: *Æolian*, *Eolian*; *æsthetic*, *esthetic*; *æso-phagus*, *eso-phagus*.

ELEMENTARY SOUNDS

Of all the long-vowel sounds, *e* is the only one that is strictly elementary. The remaining vowel sounds, except those represented by the digraphs *oi* and *ou*, and most of the consonant sounds, may properly be regarded as elementary. The sounds represented by *j* and *ch* are capable of further analysis. The digraphs *sh*, *th*, *wh*, *ng*, represent elementary sounds. There is nothing gained by transposing *wh* to represent the pronunciation of words containing that digraph, as is done in some dictionaries.

STANDARD AND CLIPPED SOUNDS

A standard sound is one that is unmodified by its surroundings. It is the fullest form of an elementary sound. The *a* in *day* and the *p* in *cap* represent standard sounds. The *a* in *take* and the *p* in *captain* are deprived of their vanishing element and are clipped sounds. Vowel and consonant sounds alike are subject to modification by their surroundings.

COGNATES

The term cognates is applied to sounds requiring the same or nearly the same mouth positions, as *f* and *v* in *fan*, *van*; *k* and *g* in *keel*, *gale*; *p* and *b* in *pin*, *bin*; *ch* and *j* in *cheer*, *jeer*.

LONG AND SHORT VOWELS

The terms *long* and *short*, as applied to vowels, have led to much confusion. As names for certain sounds, they are justified by long and almost universal use, but when so employed, all idea of length or quantity should be excluded. The short *a* in *mad*, *sang*, is longer than the long *a* in *mate*, *sake*.

NORMAL AND UNUSUAL SOUNDS

A table of elementary sounds should present as key words such words as afford the least opportunity for diversity of pronunciation. They should be arranged in groups under the letter or digraph that, in English usage, most commonly represents the sound which they are intended to illustrate. The five vowels, *a*, *e*, *i*, *o*, *u*, with their markings, represent eighteen sounds. The letter *a* alone represents seven sounds. It is unfortunate that in the present state of the English language one letter should be made to bear so heavy a burden, but these seven sounds are better represented by *a* than by any other letter or digraph. These sounds, then, are said to be the normal sounds of *a*. Other sounds of *a*, as in *any*, *what*, are better represented by other characters in the table, and are therefore unusual sounds of *a*. The normal or English sound of *ch* is heard in *chin*; its unusual sounds, in *chaise* and *chasm*.

EQUIVALENTS

Substitutes for the letters or combinations of letters usually employed to represent a sound, are called equivalents. The equivalents for short *i* are seen in the words: *English*, *beaufin*, *certain*, *been*, *foreign*, *monkey*, *carriage*, *sieve*, *women*, *tortoise*, *busy*, *build*, *plaguy*, *nymph*.

ENVIRONMENT

A full discussion of the influence of letters and sounds upon one another in their many relations as found in words, would fill a

volume. Only such points as may be necessary to a better understanding of the present work are here presented under the head of General Principles of Pronunciation. These are usually so well understood as to render the use of diacritical and other marks, in many cases, unnecessary. In the occasional, unusual, and exceptional uses of the following sounds, and in all doubtful cases, the word will be marked or respelled.

GENERAL PRINCIPLES OF PRONUNCIATION

VOWELS AND VOWEL DIGRAPHS

The vowels *a*, *e*, *i*, *o*, *u*, when forming or terminating accented syllables, are long: *ā*'ble, *mā*'ker, *ē*'ven, *mē*'ter, *ī*'dle, *vī*'tal, *ō*'gre, *lō*'cal, *ū*'nit, *pū*'pil. When they form or terminate unaccented syllables, *e*, *o*, *u*, are long, but are uttered with that diminished force and sharpness which the absence of accent always begets: *el*'ē ment, *ap*'pō site, *oc*'cū py.

The letter *a* when forming or terminating an unaccented syllable is obscure, and the letter *i* represents the sound of short *i*: *à* bout', *ap*'à thy, *vis*'ī ble, *hap*'pī ness. When *y* is used as a vowel, it falls under the same law as *i*.

A vowel followed by a consonant and terminal *e* in the same syllable is generally long: *mā*te, *cē*de, *re* pine', *lō*ne', *pro* fūse'. Many exceptions are found in the unaccented terminal syllables *-ile* and *-ine*: *fert*ile, *host*ile, *doctr*ine, *determ*ine.

A vowel followed by one or more consonants in the same syllable, but not having a terminal *e*, is short: *mat*, *ebb*, *film*, *rob*'in, *sul*'len.

ä.—Italian *a* is generally followed by *r*, with or without other consonants: *fär*, *här*m, *cär*ds. In a few words it is represented by *au* followed by *n*: *aunt*, *daunt*, *launch*.

ā.—Broad *a* is usually followed by *l*, *ll*, or silent *w*: *äl*'most, *fäl*'ter, *çall*, *paw*. It is often represented by *au*: *haul*, *maud*'lin.

â.—Coalescent *a* is usually followed by *re*. It is long *a* modified by *r*: *câ*re, *dâ*re. In derivatives, the *e* is usually dropped on taking a suffix beginning with a vowel: *shâr*'ing, *compâr*'ing. It is often represented by *air* (*pair*, *chair*) and sometimes by *ear* (*pear*, *bear*).

â.—Intermediate *a* occurs chiefly in monosyllables ending in *ff*, *jt*, *ss*, *st*, *sk*, *sp*, *nce*, *nch*, *nt*, and in their derivatives: *châ*ff, *shâ*ft, *pâ*ssed, *chânt*ing. It is a rich, musical sound, and should not be supplanted by the less musical short *a*. In its organic formation it lies intermediate between short *a* and Italian.

â.—Obscure *a* occurs only in unaccented syllables. It may constitute or end a syllable, but it never begins one. It is sufficiently differentiated from both Italian and intermediate *a* to entitle it to a distinct and separate place in the table, and is rarely incorrectly sounded. Examples: *â mong'*, *â round'*, *â bout'*, *cit'â del*, *com'pâ ny*, *so'fâ*, *i de'â*. When it forms or ends a syllable, and is immediately followed in the next syllable by an accented vowel, it often takes the sound of long *a*, as in *â e'ri al*, *châ ot'ic*.

æ.—This digraph (*æ*) represents a single elementary sound, and not the union of two sounds. It should not therefore be called a diphthong. When it forms or terminates a syllable, it has the sound of long *e*: *æ'gis*, *æ o'li an*, *Cæ'sar*. When it is followed by a consonant in the same syllable, it takes the same sound that *e* would have in the same position: *di æ'r'e sis*. The single *e* is gradually taking its place: *e o'lian*, *es thet'ic*. This digraph is largely used in the terminal syllables of scientific terms of classic origin: *An'te'na ri'i dæ*, *An'dre æ a'ce æ*.

ai.—The normal English sound of *ai* is long *a*: *pain*, *maid*, *maintain*. If followed by *r*, it becomes coalescent *a*: *fair*, *hair*, *lair*. In the unaccented terminal syllable *-tain*, it is equivalent to short *i*: *cap'tain*, *foun'tain*, *cer'tain*.

au.—The usual sound of *au* is broad *a*: *haul*, *laud*, *exhaust*. When followed immediately by *n*, it is usually Italian *a*: *jaunt*, *taunt*.

ay.—This digraph (*ay*) has the sound of long *a*: *day*, *say*, *por tray'*.

ê.—Coalescent *e* has been the subject of much controversy. It is always followed by terminal *r*, or by *r* with one or more different consonants following in the same syllable: *err*, *her*, *term*. This sound is often represented by *i*: *firm*, *squirm*. Some lexicographers confound it with *ur*, as in *burn*, *curl*.

ea.—The normal sound of *ea* is long *e*: *meat*, *cheat*, *fear*, *appear*.

ee.—This digraph (*ee*) in English words, represents the sound of long *e*: *fleet*, *cheer*.

ei.—In monosyllables and accented syllables, *ei* usually represents long *a*: *rein*, *veil*. There are many exceptions, conspicuous among them being *ei'ther*, *nei'ther*, *ceil'ing*. In unaccented syllables, the sound is usually short *i*: *for'feit*, *sur'feit*, *mul'lein*.

eigh.—The silent *gh* usually serves to give to the digraph *ei* the sound of long *a*: *neigh*, *weigh*, *freight*, *inveigh*.

eu.—This digraph is an equivalent for long *u*: *feud*, *neuter*, *pseudonym*.

ew.—These two letters combine to represent the sound of long *u*: *few*, *new*, *hewn*.

ey.—The digraph *ey*, terminating a monosyllable or an accented syllable, takes the sound of long *a*: *they*, *obey'*, *convey'*. When unaccented, it takes the sound of short *i*: *mon'ey*, *hon'ey*.

i.—When *i* forms or terminates an accented syllable, it is long; as, *i'vory*,

mi'ca, compli'ance. But when in pronunciation it is made to blend with the following syllable, it becomes short; as, divi'sion, recogni'tion, ini'tial.

ie.—In monosyllables ending in *ie*, and in their derivatives, this digraph usually represents the sound of long *i*: tie, vie, hie, lied. In an unaccented terminal syllable, it becomes short *i*: bon'nie, Jen'nie.

igh.—In this combination the silent *gh* serves to give the vowel the sound of long *i*: sigh, light, plight.

-ian, -ion.—The termination *-ian* is usually sounded like *yan*, and *-ion* like *yun*: banian, bunion, minion.

ir.—This digraph has the sound of *er*: fir, firm.

oa.—The normal sound of *oa* is long *o*: boat, coat, foal, moan.

oe.—As an English termination of a syllable, it is sounded like long *o*: toe, hoe, woe, mistletoe. In words of classic origin, the letters are usually combined, and the sound is that which *e* alone would have in the same situation: œsophagus, Œdipus.

oi.—The usual sound of this digraph is that heard in oil, toil, loin, groin.

oo.—This digraph, like most of the others, represents several sounds. The most common is that of long *oo*: food, boon, loom, mood, soon.

or.—Much diversity of opinion exists relative to the proper sound of this digraph. When unmarked in this volume, it will have the sound as heard, in orb, born, storm. In unaccented terminal syllables, the sound bends toward that of *ur*: an'chor, la'bor, stu'por.

ou.—This combination represents ten or eleven different sounds. The one represented by the unmarked character in the vocabulary list is that heard in found, lounge.

-ous.—In the unaccented terminal syllable *-ous*, the *o* is silent: en'vi ous, cal'lous, fa'mous.

ow.—This digraph represents four sounds. The most common is that heard in cow, plow, how, and is equivalent to *ou* in found. In unaccented terminal syllables, it generally takes the sound of long *o*: shad'ow, win'dow. Careless speakers give it, in such words, the sound of short *u*, as win'duh, shad'uh, mead'uh, a sound which should be carefully avoided.

u.—Long *u*, like long *i*, is a clearly defined compound vowel. Its initial element is the consonant *y*; its vanishing element is long *oo*. When preceded in the same syllable by the sound of *r*, *sh*, or *w*, it drops the *y* element and takes the sound of long *oo*: rude, shute, sure. When long *u* forms a syllable, and is immediately preceded by *r* in an accented syllable (*er'u* dite, *vir'u* lent), some authorities change *u* to long *oo*; it is better, however, to give it a shortened form of long *u*.

ur.—This digraph is often called the natural vowel. The *u* and *r* coalesce, and practically form one sound: furl, curb, murmur. It is readily differentiated from *er*, or its equivalents *ir*, *yr*.

CONSONANTS AND CONSONANT DIGRAPHS

The doubling of a consonant does not change its sound: ebb, add, staff egg, mill, crammed, pinned, sipped, purr, pass, buzz.

c.—Before *a, o, u*, the letter *c* has the sound of *k*: cat, cow, cull. Before *e, i, y*, it has the sound of *s*: cent, city, cyst.

ch.—The normal English sound of *ch* is that heard in chin, chart, chum. In words from the French, it has the sound of *sh*: chaise, charades. In words from the Greek, it has the sound of *k*: chasm, ar'chitect.

d.—The termination *-ed* following an aspirate in the same syllable, takes the sound of *t*: asked, stuffed, passed. This principle is so well understood as not to require the respelling of the word to denote its pronunciation.

g.—Like *c*, this letter before *a, o, u*, is hard, and has its own sound, as heard in gate, go, gull. Before *e, i, y*, it is usually soft, having the sound of *j*: gem, giant, gypsy. In all doubtful cases, the word or syllable will be respelled, employing the letter *g* to represent the hard, and *j* to represent the soft sound of that letter.

gh.—Before a vowel, this digraph has the sound of hard *g*: aghast, gherkin, ghostly. This combination is sometimes employed by orthoepists to represent the sound of hard *g*, as gibbous (ghib'bus). At the end of a syllable, *gh* generally represents *f*: laugh, tough, cough, enough.

n.—Before the sound of *k* in the same syllable, *n* represents the sound of *ng*: ink, sank, monk. When it terminates an accented syllable, and is immediately followed by hard *g, q, or k*, in the same word, it also takes the sound of *ng*: an'ger, an'chor, ban'quet.

ph.—The normal sound of *ph* is *f*: phase, phrensy, photograph.

qu.—This digraph represents a close combination of the sounds of *k* and *w*, and is not easily mistaken: quite, queen, quoth.

r.—While all sounds are subject to modification by their surroundings, no other consonant affects the vowel sounds to the extent that *r* does. When it follows long *a* or long *o*, it transforms these vowels at once into coalescents. When it precedes long *u*, it changes this sound into long *oo*. Before a vowel it should be trilled. In emphatic and deliberate utterance, the trill should be decided; in unaccented syllables, and in colloquial discourse, it should be less marked. The speech of most Americans would be improved by a more liberal use of the trilled *r*.

When *r* terminates a syllable having the primary accent, and is immediately followed in the next syllable by a vowel or another *r*, the vowel in the accented syllable becomes short: cär, cär'ry; hêr, hêr'oine; sir, sîr'up; fôr, fôr'eign; bûr, bûr'row. Coalescent *e* when under the secondary accent, follows the same rule: cem'e têr'y.

s.—The normal sound of *s* is that heard in *sit*, *miss*, *insist*. It is so often employed to represent the sound of *z* that in some instances it becomes almost necessary to use *c* to insure the true pronunciation of the word: *profuse* (-fuce'), *precise* (-sice'), *desist* (-cist'). The *z* sound of *s* is, in most situations, so well understood as to render respelling unnecessary: *tubs*, *drags*, *chasm*, *prism*, *pleas*, *please*, *boxes*, *churches*, *motatoes*, *advise*, *surprise*, *betrays*.

w.—As elsewhere remarked, the letter *w* is not a vowel. It often follows *a*, *e*, or *o*, and combines with these vowels to form new sounds: *saw*, *new*, *plow*.

x.—The letter *x*, like *c* and *g*, represents no sound that is not better represented by other letters. Nevertheless, it is a convenient letter, representing, as it does, two sounds in one character. Its normal sound is a combination of *ks*: *tax*, *sex*. At the beginning of a word it represents *z*: *xanthine*, *xebec*.

y.—When *y* is used as an equivalent for the vowel *i*, it is subject to all the laws governing *i*: *lie*, *lye*; *grist*, *tryst*; *tapir*, *satyr*. In verb terminations, whether accented or unaccented, it usually takes the sound of long *i*: *apply*, *multiply*, *satisfy*.

z.—The sound of *z* is heard in *zest*, *topaz*. While *s* often represents the sound of *z*, the latter sometimes takes the place of *s*, as in *Metz*, *waltz*.

zh.—The sound represented by this digraph is commonly called the *zh* sound. There is probably no word in the English language in which the characters *z* and *h* combine to represent the sound. In *azure*, *seizure*, it is represented by *z*. It is most frequently represented by *s* in the terminal syllables *-sure* and *-sion*: *leisure*, *measure*, *corrosion*, *exclusion*.

INITIAL SYLLABLES

i-, bi-, chi-, cli-, cri-, pri-, tri.—In these initial syllables, even when not accented, the *i* is generally long: *ī am'bic*, *bī og'ra phy*, *chī rop'o dist*.

TERMINAL SYLLABLES

-ceous, -cious, -scious, -tious.—These syllables are pronounced -shus: *cetaceous*, *gracious*, *conscious*, *fractious*. *Righteous* (ri'chus) is an exceptional form. In *anxious* (ank'shus), the *k* element of the *x* is pronounced in the first syllable, and the *s* element, which is changed to *sh* before *i*, is put into the second syllable. In *luscious* (lush'us), the *s* is lost, and *ci*, which represents *sh*, is placed in the first syllable.

-cial, -sial, -tial.—These syllables are pronounced -shal: *social*, *controversial*, *partial*. While the *a* sound in the *-ial* and *-ian* terminations bends toward obscure *a* or short *u*, and in the mouths of careless speakers is often omitted, yet as a standard sound, it approaches more closely to

short *a* than to any other sound. When a vowel precedes *-sial*, *-sian*, *-sion*, the initial sound of the terminal syllable becomes *zh*: as, ambrosial, elysian, elision.

-cian, -sian, -tian.—These syllables are pronounced *-shan*: physician, Persian, gentian.

-cion, -sion, -t'ion.—These syllables are pronounced *,-shun*: coercion, mansion, potion. When *s* precedes the syllable *-tion*, this syllable is sounded *-chun*: exhaustion, digestion. When *-sion* is preceded by a vowel, it is pronounced *-zhun*: corrosion, delusion. A very common mistake is that of giving this sound to *-sion* when preceded by *r*: excursion, version.

-geous, -gious.—These syllables are pronounced *-jus*: courageous, contagious.

-geon, -gion.—These syllables are pronounced *-jun*: dungeon, legion.

-ice, -ise, -ize.—In noun and adjective forms whose accent falls upon the penult or antepenult, the *i* is usually short: lat'tice, mor'tise. In verb forms whose accent, primary or secondary, falls upon the final syllable, the *i* is long: surprise, baptize, emphasize, analyze.

-ide, -ine.—In regard to these terminations, usage is greatly varied. The Chemical Section of the American Association for the Advancement of Science, in 1880, passed a vote in favor of short *i*, and afterward voted to drop final *e* in the spelling: bromin, chlorin, iodin, iodid, chlorid, bromid.

-ile, -ite, -ive.—When not under the accent the vowel *i* in the terminations *-ile* and *-ive* is generally short, and in *-ite*, long: fertile, hostile, active, genitive, aconite, appetite. There are many exceptions.

-ar, -er, -ir, -or, -ur, -yr.—A loose pronunciation of these unaccented terminal syllables makes them alike. Some reputable authorities justify this. Those who have regard for the refinements of speech will make a distinction. In dignified discourse, such words as *dollar*, *scholar*, will be sounded with Italian *a*, softened by the *r*, and obscured by the absence of accent. In colloquial utterance, the *a* will lean still farther toward the dividing line between Italian *a* and coalescent *u*. The *-ir* and *-yr* terminations are identical with *-er* in sound: *taper*, *tapir*, *satyr*. In deliberate utterance, *-or* takes the sound of coalescent *o*, smoothly uttered and without show of effort. To pronounce *actor* with almost equal accent upon the syllables, is painfully unpleasant to the listener. In conversation, *-or* resembles *-ur* more closely. The *-ur* sound, often called the natural vowel, is usually pronounced correctly. Occasionally an affected effort is made to give it the lighter form of *-er*. The terminations *-ard*, *-ared*, *-erd*, *-ered*, *-ored*, *-ured*, *-yred* (*drunkard*, *collared*, *shepherd*, *peppered*, *labored*, *mur-mured*, *martyred*) follow the same law.

-any, -ary.—In *any* and *many*, the *a* takes the sound of short *e*. When the accent falls on the antepenult, the *a* forms or terminates an unaccented

syllable, and, in accordance with the general rule, is obscure: botany, litany, boundary, granary. When the primary accent comes before the antepenult, the secondary accent falls upon the *a* which gives to the *a* in -any the sound of long *a*, and to the *a* in -ary the sound of coalescent *a*, with a strong leaning in both cases toward short *e*: miscellany, momentary.

ACCENT

In the English language, every word of more than one syllable is pronounced with a stress of voice upon one of its syllables. This stress is called accent. In words of three or more syllables, there is often a second stress, and in very long words, a third. The primary accent is the strongest. The lighter degrees of emphasis are called the secondary accents. An acute ear will often discover a difference in the force with which the secondary accents are given. The lightest of three varying accents might with greater propriety be called the tertiary accent.

INFLUENCE OF THE ACCENT

In monosyllables and in accented syllables the vowels are usually uttered with sharpness of outline; in unaccented syllables, with less distinctness. In all forms of dignified discourse, the sounds, consonant as well as vowel, are given a sharpness that would be quite unbecoming in colloquial speech. But the unaccented vowels must never be uttered in a careless or slovenly manner. Walker, the English lexicographer, declares that a neat pronunciation of these forms constitutes "one of the greatest beauties of speaking."

PLACE OF THE ACCENT

In nouns and adjectives of two syllables the accent usually falls upon the first, while in verbs, it occurs upon the second: al'mond, bel'low, hap'py, cheer'ful, appear', convey'. So general is this law that the exceptions, which are quite numerous, are frequently mispronounced; as, adept', adult', research', recess', romance', finance', canine', robust', rotund', con'strive, do'nate, ran'sack, lo'cate.

DISCRIMINATIVE ACCENT

The noun and verb forms of the same word are often distinguished by change of accent; as, con'tract, contract'; es'cort, escort'. Adjectives and verbs are contrasted in like manner; as, ab'ject, abject'; ab'sent, absent'.

ANTITHETICAL ACCENT

A contrast in thought is often expressed by what is known as rhetorical or antithetical accent. The accent is transferred from its normal position to the contrasting syllable; as, He must in'-crease, but I must de'crease.

FOREIGN WORDS

VOWELS

In most of the languages of Continental Europe the letter *a* is sounded like *ä*, *e* like *ā*, and *i* like *ē*. The digraph *œ* is sounded nearly like *u* in burn. It is best formed by an attempt to sound *ě* with the mouth in position for *ō*. Long *u* is generally sounded like *ōō*. The French or German *ü* has no equivalent in English. It is fairly well represented by uttering *ē* through the mouth position for *ōō*.

CONSONANTS

The sounds of the consonant letters in foreign languages are even more irregular and unlike the English than are the vowels. These will be explained and their use in words illustrated.

The letter *r* is more strongly trilled than in English. When *m* and *n*, in French and Portuguese, occur at the end of a word or syllable, they have no distinctive sound, but simply impart nasality to the preceding vowel.

The digraph *ng* takes the English sound in most of the European tongues, but in Italian the *n* does not blend with the *g*. The sound of *th* is usually that of *t*.

OPEN AND CLOSED SYLLABLES

Syllables ending in a vowel or vowel sound are said to be open; those ending in a consonant, closed.

ACCENT

Accent, as this term is understood in English, is not so marked in the languages of Continental Europe. The stress is more evenly distributed.

Accented syllables are not struck so forcibly, and unaccented syllables are not slighted so much, as in English.

In French, the syllables are uttered with nearly equal stress. To the American ear many French words sound as if accented on the last syllable, and, to mark their proper pronunciation in English dictionaries, the primary accent is often placed upon the final syllable of such words. In the German, Hungarian, Dutch, and Swedish languages the stress is usually on the root syllable; and in the Italian, Spanish, Portuguese, and Polish, it is on the penult. In some languages the vowel quantities determine the prominence of the syllables rather than any particular stress or accent.

CHINESE

- e** = ä, Pe-chi-li (pā'chē'lē').
i = ē, Pe-chi-li (pā'chē'lē').
ow = ōō, Chang-Chow (chäng-chōō').
u = ōō, Chang-Cheun-Cham (chäng-chē ōōn-chäm), Aigun (i gōōn').

DANISH

- a** = ä, Gram (gräm), Rafn (räfn).
aa = a, Aalborg (äl'börg), Aarhus (ar'hōōs).
e = ä when final in accented syllables; when not final it equals ě, Lemvig (lēm'vīg). ě = ä, Zoëga (zō ä'gä).
i = ē in open accented syllables and in monosyllables, Hagi (hä'gē); in other situations = ĩ, Beelitz (bā'līts).
ii = ē in open accented syllables and in monosyllables; in other situations = ĩ.
o = ö when open, Altona (äl'tō nä); when closed = ō.
oe = ú, Hoe (hú); ö has the same sound, Römer (rú'mer).
u = ōō when open, Hude (hōō'thě); when closed = ōō, Huote (hōōn'tě).
uu = ōō, Aarhus (ar'hōōs).
c = k before a, aa, o, u; before e, i, ö, y, it is like s.
d = th when between two vowels or at the end of a syllable after a vowel, Budir (bōō thēr'), Egvad (ĕg vāth'). It is silent before t or s, Gjedsted (yě stěth'), and also when final after l, n, r, t. When final it is sounded like t. When initial, d is sounded as in English.
g = g. After a vowel in monosyllables it is slightly guttural.
h = h. Before j and v it is silent, Hvam (väm).
j = y, Fjelsö (fyĕl'sú), Hjarno (yär'nō).
v = ōō after s; elsewhere = v.
y = ü, Nyerup (nü'er ōōp).

DUTCH

- a** = ä in open syllables, Hals (häls), Brabant (brä bānt').
- aa** = ä in open syllables, Raalte (rāl'tě), Alkmaar (älk'mär').
- au** = ou, Van Pauw (vān pow).
- e** = ā when final in accented syllables, Breda (brā'dä); unaccented it = ú. Before r it = â, Berkel (bār'kěł). Before two or more consonants it = ě, Delft (dělft).
- ee** = ā when final in monosyllables and accented syllables, Eem (ām), Weenix (wā'nīnks). Before r it = â, Eerbeek (âr'bāk).
- i** = ē in open syllables, Mieroslavski (myě rō slāv'skē). When doubled, it has the same sound. Before a consonant in the same syllable it = ĩ, Dilsen (dīl'sěn).
- ie** = ē, van Mieris (vān mē'ris).
- o** = ō before two or more consonants, Dokkum (dōk'kōōm). In open syllables it takes the sound of ō, Hodel (hō'děl).
- oe** = ō, Doezum (dōō zōōm').
- oo** = ō in open syllables, Van Noort (vān nōrt'), Noodt (nōt), Troost (trōst).
- ou** = ou, Wouwerman (wow'ver mān).
- u** = ü in open syllables, Nuland (nū'lānt). When doubled, it has the same sound. In closed syllables it is equivalent to ū, Jubbega (yūb bā'gä).
- uy** = oi, Enkhuysen (enk hoi'sen).
- ch** = ch, Bochoz (bōch'ōłts).
- d** = t when final, Herveld (hěr'vełt); elsewhere it has the sound of English *d*, Bedum (bā'dōōm).
- dt** = t, Bildt (bīłt), Amersfoordt (ā'mers fōrt).
- g** = ch or h strongly aspirated, Bergum (běr'hōōm).
- j** = y, Jelsum (yěl'sōōm).
- sch** = sh when final before silent e; elsewhere it = sk nearly, Scheld (skěl't), Schiedam (skē'dām).
- y** = ĩ nearly, Mytens (mī'těns), Nieuwentyt (nū'veñ tīt).

FRENCH

- a** = ä when open, About (ä'bōō'); when closed, it has the sound ā.
- ai** = ä, Pain (pāñ).
- am, -an, -em, -en** = ðñ, at the end of a word or syllable, Ozanam (ō zā nõñ'), Allemand (äl'mðñ'), Vieuxtemps (vyú tōñ'), de Montpensier (dè mōñ pōñ sè ā').
- au** = ō, Aube (ōb), Aude (ōd), Pau (pō), Quinault (kē'nō').
- aux** = o, *jeux pas* (fō pā).

- e** = *ā* when open, Sablé (sä blä'). **e** = *ě* when closed, Mettray (mě trā'); when final and unaccented it is silent, Scarpe (skärp). Before *r* when not followed by a second consonant, it is sounded like *â*, Perdu (pâr'dü').
- eau** = *ō*, Beaune (bōn), Eauze (ōz), *chateau* (shä tō').
- eaux** = *ō*, Meaux (mō).
- ee** = *ā*, Seez (sä).
- ei** = *â* before *r*, Pereire (pě'râr').
- ens** = *ăn*, Amiens (ä'mē ăn). When accented it takes the sound of *õn*, Perrens (pâ rõn').
- ent** In the third person plural of verbs, *ent* is silent.
- esmes** = *ām*, Solesmes (sō lām').
- esnes** = *ân*, Fresnes (frân).
- i** = *ē* when open, Picot (pē'kō'), Ribot (rē'bō'). **i** = *ı* when closed, Finisterre (fın is târ').
- ie** = *ē*, Marie (mä'rē').
- ier** = *ē ā*, Garnier (gär nē ā').
- im, -in, -ym, -yn, -aim, -ain, -eim, -ein** = *ăn*, at the end of a word or syllable, timbre (tăn'br), Poussin (pōō'săn'), Nymph (nănřf), syntaxe (săn'täks).
- o** = *ō* when open, Amero (ä'mārō). **o** = *ö* when closed, Postel (pös'těl).
- oi, ois, oix** = *wä*, Noire (nwä'rä'), Blois (blwä), Agénois (ä zhā nwä'), Foix (fwä).

- u** = *ü* when open, *étude* (ä tüd').
- um, -un** = *үн* at the end of a word or syllable, *humble* (үн'bl) *chacon* (shäk'үн).
- c** = *s* before *e, i, y*. Before *a, o, u*, **c** = *k*. **ç** has the sound of *s* before all vowels.
- ch** = *sh*, Auch (ōsh), Chauvin (shō'văn'). Before a consonant in the same syllable it has the sound of *k*.
- cq** = *k*, Flobecq (flō běk'), Roncq (rõnk).
- d, g, n, s, t, x, and z** when final are usually silent, and leave the syllable open, Nord (nōr), Flers (flâr), Gannat (găn'nä'), Géant (zhā'õn'), Carmaux (kär'mō'). In proper names, *d*, when final, is generally sounded, Boyard (bō'yärd'). Before a vowel beginning the next word it has the sound of *t*.
- de** = *dé*, de Tocqueville (dé tōk'vıl).
- g** = *zh* before *e, i, y*, Bergerac (bâr zhā räk'), Agen (ä zhõn'); before

- a, o, u, it has the sound of English g, Guerande (gā rōnd'), Guise (gēz). When final it is usually silent, Troplong (trō'lōn').
- gn** = ny, Mignet (mēn'yā'), Persigny (pēr'sēn'yē').
- gue** = gā, Guerande (gā rōnd').
- gui** = gē, Guise (gēz).
- h** Generally silent, St. Haro (st. ä'rō), St. Hautmont (st. ō'mōn'), Heric (ā'rēk').
- j** = zh, Anjou (ōn zhōō').
- ll** = y or ly, Pouillet (pōō'yā' or pōō'lyā').
- n** See d.
- pt** = t, Sept-Isles (sēt ēl').
- q and qu** = k, Alquier (äl kē ā'), Quost (kōst).
- ques, quet, quette** = kā, Quesnel (kā'nēl'), Hecquet (ā'kā').
- s** = z when between two vowels, Lisieux (lē'z'l'ú'), Rémusat (rā'mú'zā'). When final it is often silent, Paris (pā'rē'), Serres (sār).
- t** When final is usually silent, Guyot (gē'ō'), Thibaut (tē'bō').
- x** = z before a vowel, Auxerre (ō zār'). See d.
- y** = ē, Gretry (grā'trē'), Oudry (ōō'drē').
- z** final is silent, Nez Percés (nā'pār'sā'). See d.

GERMAN

- a** = ä, Abresch (ä'brēsh), Kalk (kälk). **ä** = ě, Wächter (věch'ter).
- aa** = ä, Saale (sä'lě).
- ai** = i, Nicolai (nē'kō li).
- au** = ou, Pausa (pow'sa), Haupt (houpt), Rau (row), Strauss (strous).
- e** = ā in accented open syllables, Schlegel (shlā'gěl). Before r, or two consonants, or a double consonant = ě, Hersfeld (hērs'fēlt). When final = ê, Reiske (rīs'ké).
- ee** = ā, Schneeberg (shnā'běrg).
- ei** = i, Eider (i'der).
- eu** = oi, Beuthen (boi'ten), Creuzburg (kroits'bōōrg).
- ey** = i, Pleyel (plī'ěl).
- i** = ē in open syllables or before a single consonant, Henrici (hen-rī'sē). In closed syllables it equals ĩ, Fritz (frīts).
- ie** = ē, Siegen (sē'gēn). The g has a slightly guttural quality.
- o** = ō before two consonants or a double consonant, Morhof (mōr'hōf). In other situations it = ō, Zollikofer (tsōl'ē kō fer).
- u** = ōō when open, Kutzy (kōō'tē). In closed syllables it has the sound of ōō, Luckau (lōōk'ow).
- ui** = wē, pfui (pfwē).
- b** = p when final or immediately before a final consonant, Abt (āpt).

- c** = k before a, o, u, Cassel (käs'sěl), Coblenz (kō'blents). Before ä, e, i, y = ts, Peucer (poit'ser).
- ch** = ch, Bach (bäch). When initial it = k, Chemnitz (kēm'nits).
- d** = t when final or immediately before a final consonant, Crefeld (krä'fält), Burscheid (bōōr'shit).
- dt** = t, Mundt (mōōnt), Schmidt (shmt).
- g** = g, Siegen (sē'gen). It sometimes takes a guttural quality. When followed by t it is equivalent to ch, Vogt (fōcht).
- j** = y, Jena (yā'nä), Jacobi (yā kō'bē).
- s** = z when initial or after a consonant other than b, p, or ch, Reinesius (rī nā'zē öös), von Riedesel (fōn rē'dē zěl).
- sch** = sh, Schaumburg (shoum'bōōrg).
- sz** = s, *flusz* (flōös), *gusz* (gōös).
- th** = t, Beuthen (boi'těn).
- ti** = ts in the terminal syllable -tion, *nation* (nät sī ōn').
- z** = ts, Brenz (brēnts), Bregenz (brā'gěnts).

- u** = ōō, Ujfalvy (ōō'ē fōlv). **ú** = ōō or ōō, Lugos (lōō gōsh'), Munkacsy (mōōn kā'chē).
- c** = ts, Popovec (pō pō vêts').
- cs** = ch, Bács (bäch), Becse (bět'chě), Csik (chĭk), Sztanicsics (stā nē-chĭch').
- cz** = ts, Brestovac (brēs tō'vāts), Petrovacz (pā trō vāts'), Czegled (tsā'glěd).
- ds** and **dy** = j, Mindszent (minj sěnt').
- g** = g, Bogat (bō gāt').
- gj** and **gy** = j.

- gh** = g, Ghimes (gē'mēs).
gy = dy, Gyoma (dyō'mä), Magyar (möd yör').
j = y when used as a consonant, Jankovacz (yön'kó'väts'). When employed as a vowel it is equivalent to ē, Ujfalvy (ōō'ē fölv).
rz = zh, Brzezany (bzhā zhā'nē).
s = sh, Almas (äl mäs'h'), Borsod (bör shöd'), Szentes (sēn tēs'h'), Saros' (shā'rōsh).
sz = s, Paszto (päs'tō), Sztanicsics (stā nē chích').
ts and ty = ch, Hertkovtsi (hērt köv'chē), Brettyo (brēt'chō).
y = ē when used as a vowel, Gyalu (gē ä'lōō).
zs = zh, Uzsok (ōō zhök').

ITALIAN

- au** = ou, Aula (ou'lä).
e = ä in open syllables, Amadeo (ä mä dä'ō). In closed syllables it equals ě, Pecci (pēt'chē), Bettola (bēt tō'lä).
er = ěr, Perrone (pēr rō'nä).
i = ē, Almici (äl mē'chē), Altissimo (äl tēs'ē mō).
o = ō when open, Allori (äl lö'rē). When closed it equals ö, de Ponte (dä pōn'tä).
oi = ō ē, Goito (gō'ē tō).
on = ōn, Conti (kö'n'tē).
u = ōō, Amelunghi (ä mä lōōn'gē).
c = ch before e and i, Paceco (pä chā'kō), Portici (pōr'tē chē).
cc = k before a, o, u, Lecco (lēk'kō). Before e and i it = tch, Castelluccio (käs tēl lōōt'chō), Pecci (pēt'chē), Ricci (rēt'chē), Riccio (rēt'chō), Peccioli (pēt'chō lē).
ch = k before e and i, Cherubini (kā rōō bē'nē), Chiusa (kē ōō'sä).
cch = k, Lamporecchio (läm pō rēk'kē ō).
g = j before e and i, Agira (ä jē'rä).
gg = dj, Buggiano (bööd jä'nō), Caravaggio (kä rä väd'jō).
gh = g, Alghisi (äl gē'zē).
gl = ly, Ceglie (chäl'yä), Ronciglione (rōn chēl yō'nä).
gn = ny, Bagnara (bän yä'rä), Bagni (bän'yē).
h Generally silent, Borghetto (bör gät'tō).
j = y, Ajaccio (ä yät'chō), Bojano (bö yä'nō).
ng n does not blend with g, Angri (än'grē).
qu = kw, Querini (kwä rē'nē).
s = z when between two vowels, Alvisi (äl vē'zē), Paisiello (pī zē ēl'lō).
sc = sh before e and i, Bisceglie (bē shäl'yä), Scicli (shēk'lē), Sciglio (shēl'yō). Before a, o, u, it equals sk, Scarpa (skär'pä).
sch = sk, Schio (skē'ō).

- z** = ts, Luzzara (lōōt sä'rä), Levantzo (lä vänt'sō). When initial or after a consonant it equals dz, Zanchi (dzän'kē), Brienza (brē ěn'dzä).
- zz** = ts, Arezzo (ä rēt'sō).

NORWEGIAN

The sounds are, for the most part, like those of the Danish.

- d** = t when final in many nouns and adjectives, Tonstad (tōn'stät).
- g** = y before ä, e, i, ö, y, Vigerö (vē yä'rū).
- j** = y, Fjeld (fyēld).
- sk** = sh, Skjergehavn (shyēr'yä hävn).
- y** = ü, Trydal (trü'däl).

POLISH

- o** = ō when unaccented, Bulkov (bōōl'kōv). When accented it has the sound of ǒ, Dobra (dōō'brä).
- ow** = ov, Mzczonek (mshä zō'nōv), Pinczow (pīn'chōv).
- c** = ts, Dzialoszyce (dzē ä lö shē'tsä), Potocki (pō tōts'kē).
- ch** = ch. When initial it equals k, Checiny (kēt sēn'yē), Chelm (kēlm).
- cz** = ch, Czestochow (chēns tō'kōv), Pinczow (pīn'chōv).
- dz** = j, Bodzetyń (bō jē'tēn).
- j** = y, Zamojski (zä moy'skē).
- rz** = zh, Brzezyn (bzhä'zīn).
- sc** = ts nearly, Brzesc (bzhäts).
- sz** = sh, Naruszevitch (nä rōō shē'vīch).
- w** = v, Poniatowski (pō nē ä tōv'skē).
- y** = ü nearly, Pulawy (pōō lä'wü).

PORTUGUESE

- a** = á when final, Braga (brä'gä).
- am** = ouñ, Azambuja (ä zouñ bōō'zhä).
- ão** = ouñ, Bissão (bīs souñ').
- o** = ō when open, Minho (mēn'yō). In closed syllables it has a softened or relaxed form of the same sound.
- ou** = ō nearly, Vouga (vō'gä).
- ç** = s, Alcobaça (äl kō bäsä).
- cc** = kk before a, o, u. Before e, i, y, it equals ks.
- ch** = sh, Chanza (shän'zä).
- g** = j before e, i, y, Angeja (än jä'zhä).
- gue** = gä, Agueda (ä gä'dä).
- gui** = gē, Aguiar (ä gē är').

h	Often silent, Asinhal (ä sê näl').
j	= zh, Alemtejo (ä lën tâ'zhô).
lh	= ly, Velho (vâl'yô).
m	= ñ when final or when following <i>e</i> , Almairim (äl mä'ê rên).
n	= ñ when final or when following <i>e</i> , Almendra (äl mân'drâ).
nh	= ny, Banho (bân'yô).
qu	= k before e and i, Alemquer (ä lën kâr'). Before a and o it equals kw.
s	= z when between two vowels, Areosa (ä rã ô'zã).
x	= sh generally, Caxaria (kã shã rê'ä).
z	= s when final, Aviz (ä vês').

RUSSIAN

a	= ä, Susdal (sōs'däl'), Sviaga (svê ä'gä).
au	= ou, Chaussy (chou'sê).
ev	= ěf, Balashev (bã lä shěf').
i	= ě, Svir (svēr), Styr (stēr).
ch	= k, Chotyn (kō tēn').
sch	= sh, Schavli (shäv'lē), Schklov (shklōv).
w	= v, Narew (nä'rěv).
y	= ě, Chotyn (kō tēn').

SPANISH

Words ending in a consonant usually take the accent on the last syllable; those ending in a vowel, on the penult.

ai	= i, Daimiel (dī mē ěl').
au	= ou, Alcaudete (äl kou dã'tã).
ue	= wã, Cienfuegos (sē ěn fwã'gōs).
b	= v between two vowels, Ribera (rē vã'rã), Cordoba (kor dō'vã).
c	= th before e and i, Albacete (äl bã thã'tã), Alcira (äl thē'rã). When final or before a, o, u, l, r, it equals k.
ch	= k before a vowel having the circumflex accent. In other situations it is sounded like the English ch, except in the province of Catalonia, where it has the sound of k.
d	= th when final, or when between vowels, Mellid (mēl lēth'), Adajo (ä thã'hō).
de	= dã, de Toledo (dã tō lã'dō).
g	= ch or y before e and i, Puente de Genil (pwēn tã dã chã nēl'). Before a, o, u, l, r, it has the sound of English g.
gua	= gwã, Guadalquiver (gwã däl kē vēr').
gue	= gã, Guedeja (gã dã'hã). güe = gwã, güepil (gwã pēl').
gui	= gē, Aguilas (ä'gē lãs). güi = gwē.

- guo** = gwō.
h Silent, except before ue, when it has a nasal sound, Brihuega (brē wā'gä).
j = ch nearly, or h strongly aspirated. Badajos (bäd ä hōs'), Loja (lō hä').
ll = ly, Montilla (mōn tēl'yä), Tafalla (tä fal'yä).
ñi = ny, Alcañiz (äl kän yēth'), cañon (kän'yon).
qu = k, Barranquilla (bär rän kēl'yä).
y = ē when standing alone or when final or after a vowel followed by a consonant. Orozco y Berra (ō rōs'kō ē bē'r'rä). Before a vowel in the same syllable, or between two vowels, it has the sound of j.
z = th, Alcañiz (äl kän yēth'), Azuaga (ä thōō ä'gä).

SWEDISH

In Swedish words the accent falls on the root syllable.

- a** = ä, von Wrangel (fōn vräng'ēl). **ä** = ā.
aa = a, Kaai (ka'ē).
e = ā when accented, Wener (vā'ner).
i = ē, Kisa (kē'sä).
o = ō when final, Orno (ōr'nō); elsewhere it = ö. **ö** = ū, Nordenskjöld (nōr'dēn shūld), Ulfö (öl'fū).
c = k before a, o, u, and aa, Calmar (käl'mär). Before e, i, y, ä, and ö it has the sound of s, Cimbrishamm (sēm brē'shäm).
ch = k before a, o, u, and aa. When initial, it takes the sound of English ch.
dt = t, Zetterstedt (zēt'ter stēt).
f = v when final, Anderslöf (än'der slûv); **fv** = v, Afvaudden (ä vou'dēn).
g = y before e, i, ä, ö, y, Gefleborg (yēv lä bōōrg'). When it ends a syllable following another consonant it takes a sound resembling ch or g strongly aspirated, Taberg (tä'bērch, or tä'bērg). Elsewhere as English g, Berga (bēr'gä).
h = h English. It is silent before j and v.
j = y, Jemtland (yēmt'länt), Björnstjerna (byörn styēr'nä), Hjelmar (hyēl'mär).
k = ch before ä, e, i, ö, y, Kengis (chän'yēs); elsewhere like English k, Kull (kööl). It is sounded before n, Knaby (knä'bē).
kj = ch, Kjoping (chō'pēng).
skj = sh, Nordenskjöld (nōōr'dēn shūld).
tj = ch, Tjorn (chōörn).
y = ü, Yngaren (ün'gä rēn).

CAPITALS

The use of capitals as a means of distinction, like the use of italic, has been carried to excess. The custom of the best proof-readers of to-day is to allow no capital where a lower-case letter will serve. The chief difficulty attending the use of capitals grows out of the fact that a word may demand a capital in one situation, and a lower-case in another. In headings and titles, even a preposition or conjunction may be so important as to require a capital. In writing, full-sized capitals are indicated by three parallel lines drawn under the letter or letters; small capitals, by two lines. The following suggestions and cautions will prove helpful:

SENTENCES

Every sentence must begin with a capital letter. To this rule there is probably no exception unless it be in quoting from an illiterate writer to show that he began his sentence improperly.

POETRY

Every line in poetry must begin with a capital letter. This does not apply to an incomplete line carried over by reason of a narrow measure or page.

PROPER NAMES

Among the rules for the use of capitals, none greets the ear of the schoolboy more frequently than that which says, "Every proper name must begin with a capital letter." But while the letter of the rule is familiar, its spirit is commonly misunderstood. Such words as Government, Administration, State, Constitution,

Cabinet, Capitol, Committee, are proper names in one situation, and common in another. The line of distinction is sometimes so fine that even the teacher who reprimands his pupil for neglect of the rule is at times uncertain how to decide.

PREFIXES TO PROPER NAMES

Von, in German, Van, in Dutch, De or D' in French, and Da, De, Della, or Di, in Italian, when used to introduce a foreign proper name, usually take a capital; as, D'Aubigne, De Mille, Van der Meer, Von Wallenstein. When preceded by a title or by the baptismal name, the lower-case letter is most generally used in French and German; as, M. de Tocqueville, Ludwig van Beethoven. In the Italian language, usage is somewhat divided.

Proper nouns and adjectives preceded by pre- are written with lower-case and a hyphen: pre-adamite, pre-mosaic, pre-raphaelite.

ADJECTIVES

Words like Senatorial, Congressional, Presidential, Gubernatorial, Councilmanic, referring to a definite person or office, are capitalized.

Many qualifying adjectives derived from proper names, and compounded with prefixes or suffixes, as, herculean, plutonian, tropical, hyperborean, are not capitalized.

DEITY

All names and appellations of the Deity, as God, Jehovah, Almighty, Father, Creator, Son, Holy Ghost, Saviour, Jesus Christ, Divine Spirit, Divine Benefactor, must begin with a capital.

In the Bible the pronouns He, His, Him, Thou, Thy, Thine, Thee, referring to the Deity, are set in lower-case, but in hymn-books, and manuals of devotion, and in newspapers, magazines, and epistolary correspondence, they are capitalized.

BIBLE

Capitals are employed in naming the Bible or parts thereof, and in the important divisions of the Book of Common Prayer; as, The Scriptures, Gospels, Epistles, Psalms, Pentateuch, Collects, Litany, etc.

SATAN

Satan and Beelzebub are written with capitals. Devil, and Evil Spirit, when used with a strongly emphasized individuality, take a capital; when used in general terms, they often are written in lower-case.

HADES

Poetical and mythological terms relating to the place of future abode, as Hades, Valhalla, are capitalized; but hell, purgatory, paradise, and similar words commonly have lower-case initials.

TITLES OF OFFICE AND HONOR

When titles of distinction precede a name, they are capitalized; as, Secretary Knox, Corporal Jones, Engineer Smith, Officer Brown. In the use of military titles, some writers use lower-case for non-commissioned officers up to corporal and midshipman. Terms employed to denote ordinary vocations, as, barber Jones, coachman Kelly, are also written lower-case. When the title follows the name, the first letter need not be capitalized, as:

Hon. John Hay, secretary of State.

Hon. Boies Penrose, senator from Pennsylvania.

When abbreviated titles of honor immediately follow a name, they are capitalized:

W. T. Harris, Ph.D., LL.D.

Joseph Spencer Kennard, Ph.D., D.C.L.

Henry C. McCook, D.D., Sc.D.

James Thompson, Esq.

A short name in lower-case, followed by a long list of titles in

large capitals, is not pleasant to the eye. Small capitals give a neater appearance to the page.

The words Judge and Justice should always be capitalized when applied to the official holding that name.

A title of office when used instead of the name of the incumbent is capitalized, as:

He called upon the Governor.

Mr. Speaker, I rise to a point of order.

Good morning, Senator.

The Queen drove to the palace.

The Vice-president and the Lieutenant-colonel called at the Secretary's office.

COMPOUND TITLES

But one capital is required in a compound title, as, Ex-president Harrison, Major-general Stewart, Chief-justice Marshall, Vice-president Morton, Governor-general Brown, Rear-admiral Greene. By some, the form ex-President is preferred.

SOCIETIES AND CORPORATIONS

The principal words of the titles of societies and corporations begin with a capital letter; as, The Society for the Protection of Children; The Senate and House of Representatives of the State of Pennsylvania. Such expressions as, the Club, the House, the Assembly, are often employed for brevity, and are capitalized. When not designed to specify any particular organization or association they are written with lower-case; as, a state, a government, a company; but when used as a proper noun, require a capital; as, the State, the Government, the Company, the Union, the Parliament, the Convention. It will be observed that those written with a capital usually take the article *the* before them.

DENOMINATIONS, PARTIES

The names of religious denominations and political parties are capitalized. The word Church is capitalized when it refers

to a denomination, and also the word State as applied to a system of government or to one of the United States.

CEREMONIAL FORMS

In formal letters or addresses to dignitaries, such terms as Your Honor, Your Majesty, Your Reverence, are often employed instead of the name. In the third person, when Her Grace, His Royal Highness, and similar forms are used, the pronoun as well as the noun should be capitalized. When reference is made to a special person, the office with a capital letter is usually employed; as, the President, the Governor, the Senator, the Pope, the Sultan. When the title has no application to a definite individual, a lower-case initial must be used.

Complimentary salutations occurring within the body of a sentence or paragraph, as *sir*, *madam*, *my lord*, do not require a capital.

TITLES OF BOOKS, PERIODICALS, PLAYS

The title of every book, periodical, play, or picture mentioned in the text begins with a capital letter, and every important word of the title is usually capitalized, as:

Robins' Romances of Early America.

Kennard's Some Early Printers.

Sheridan's School for Scandal.

In lengthy titles, the important words, as nouns, verbs, participles, and adjectives, should be capitalized; the articles, conjunctions, and prepositions rarely or never. Usage is somewhat divided in regard to titles, some excellent proof-readers limiting the use of capitals to nouns and important verbs, and setting the rest of the title in lower-case.

Mr. F. Horace Teall, who has made this and other points in writing a subject of close study, says that the best rule for capitalization in headings seems to be to capitalize all the important or emphatic words. He then declares that the best practice under this rule would be the avoidance of strenuous effort toward in-

flexible application of it, remarking that most rules are better and more satisfactory in their result if not applied too minutely.

When reference is made in the text to the name of a newspaper or periodical, the article *the* is not capitalized, as, It appeared in the Tribune; but in the naming of a book, it takes a capital, as, Have you read *The Taming of the Shrew*?

TABLES OF CONTENTS

The same rule that governs the use of capitals in book titles may be applied to tables of contents, summaries of chapters, running titles, and similar work. Use capitals for nouns and important verbs, always; for pronouns, adjectives, participles, and adverbs, seldom; for articles, prepositions, conjunctions, and interjections, rarely or never.

PERSONIFICATION

Abstract qualities, when personified in vocative address, are capitalized, as:

O Freedom! thou art not as poets dream.

O Liberty! what crimes are committed in thy name!

When such words as war, slavery, intemperance, riot, fortune, fame, fate, are not employed as synonyms of personified forces, they should not be capitalized.

I AND O

In English composition, the pronoun *I* and the interjection *O* always take the capital. The interjection *oh* is written with a lower-case letter, except at the beginning of a sentence.

DAYS, MONTHS, HOLIDAYS

The names of the days and months begin with capitals. Feast- and fast-days, festivals and holidays, follow the same rule; as, Arbor Day, Decoration Day, Good Friday, Christmas, Easter, Thanksgiving. Days of special historic interest, as Black Friday, are also capitalized.

GEOGRAPHICAL NAMES

Regions or sections of the world, used as proper nouns, take a capital, as, the Orient, the Occident, the Levant, the Tropics.

Geographical terms used as nouns or adjectives, in the vocabulary of trade and commerce, are usually written with lower-case letters, as china, morocco, castile soap, india rubber, prussian blue, turkey red. Custom sanctions the use of the capital in the words, French, German, Spanish, Italian, when used as qualifiers, and the dictionaries endorse the custom, but the catalogues of manufacturers, merchants, and auctioneers, and the usage of some reputable writers, ignore the custom, and use the lower-case letter. The words anglicized, americanized, romanized, germanized, and frenchified, like roman, italic, and arabic, in the terminology of the printer's sanctum, are gradually winning their way with the lower-case initial.

EAST, WEST

When used as nouns to particularize and define sections of the country, the terms East, West, North, South, and the compounds Northeast, Southwest, etc., are capitalized. When used to denote direction only, they are not capitalized:

And fresh from the west is the free wind's breath.

The wind was north-northwest.

Geographical and other terms indicative of place, as, river, lake, island, mountain, valley, road, street, avenue, when qualified by another descriptive word or phrase, are capitalized, as:

Bay of Biscay	Arlington Heights
Long Island Sound	Lafayette Place
Blackwell's Island	Fall River
Lancaster County	Rocky Mountains

When the general name precedes the particular, as, "In the county of Chester, state of Pennsylvania," or, "In the city of San Juan, on the island of Porto Rico," only the specific name is capitalized.

LEGAL DOCUMENTS

In legal documents and in all formal writings, and also in cases where displayed typography is desired, capital letters are used for the general as well as for the specific name.

HISTORIC EVENTS

The principal words in the names of historic events are capitalized, as:

the Captivity	the Civil War
the Restoration	the Peace of Utrecht
the Deluge	the Council of Nice
the Middle Ages	the Diet of Worms
the Renaissance	the Age of Pericles

QUOTATIONS

A complete sentence when quoted should begin with a capital. Words, phrases, and broken parts of a sentence, occurring within the body of the text, should be inclosed by quotation marks, but not capitalized.

DISPLAY

In newspapers and magazines, in circulars and other forms of advertising, in job-work, and wherever display is desirable, capitals may be used more freely than in book-work. No definite rule can be laid down. In case of doubt, it is safer to use lower-case. The style of an author is often impaired by an excessive use of capitals. Mr. Theodore Low De Vinne says that a projecting capital in a text is like a rock in the current, for it diverts the eye and interrupts an even stream of attention.

EMPHASIS

An initial capital is sometimes used as a form of emphasis to call attention to a word. In some kinds of descriptive writing, this use of the capital may be permissible, but if the word is repeated, it is better to use a lower-case after the first instance.

THE, O', AND A. M.

The definite article is often capitalized when it should be written with a small letter: the Public Ledger, the New York Herald, the Dark Ages, the Thirty Years' War.

In expressions like Tam o' Shanter, John o'Groat's, six o'clock, *o* is set in lower-case, with the apostrophe following. In proper names the *o* is separated from the word following by a short space.

The abbreviations a. m. and p. m. are generally written with lower-case letters.

SMALL CAPITALS

Two lines drawn under one or more words indicate that such parts of the manuscript are to be set in small capitals. The uses of small capitals are many and important, but, like large capitals, they should not be employed to excess. Coming between capital and lower-case, they afford a pleasing variety on a title-page, and are of advantage for the side-headings of short articles or separate paragraphs, for running titles, and whenever variety or display is desired.

They are often selected for the first word of a new chapter following a heavy-faced or ornamental initial. If the first word is very short, the second, and sometimes the third, word is set in small capitals.

When the chapter begins with the name of a person, each part of the name is set in capitals, the first letter of each part of the name taking a large capital, as:

OLIVER WENDELL HOLMES was one of the most genial of American writers.

The signature of a writer or an editor, or the credit given to an author may be set in capitals and small capitals at the end of an article or paragraph. Italic lower-case is preferred by some good proof-readers. When book and author are named, the name may be set in small capitals and the title of the book in italic.

The dedication of a book is usually set in small capitals. For purposes of emphasis, small capitals, as well as italic, must be used sparingly.

ITALICS

PROPER USE OF ITALICS

An excessive use of italic in print, like repeated emphasis in oratory, or profuse underscoring in writing, defeats the purpose for which it is intended. Where everything is made striking, nothing impresses. While the use of italic has been carried to excess, however, it has its proper place, and cannot be dispensed with. Its most important office is that of marking words and phrases that need to be distinguished in the text. It is also employed for running titles, for the headings of tables, and for subheadings. In the names of vessels, as the *Merrimac*, the *Illinois*, italic is generally employed.

EMPHASIS

The use of italics for emphasis, formerly quite common, is now almost wholly discontinued, and is confined chiefly to inexperienced writers. The modern type-setting machine makes no adequate provision for italicizing, and this, too, has encouraged the disuse of italics. Italics are rarely seen in the text of the reading-matter of the leading newspapers. The commingling of upright with inclined letters is displeasing to the eye, and if too freely employed, is confusing. A roman letter with a slightly bolder face is, by the better printing establishments, made to take the place of the italic.

FOREIGN WORDS

Foreign words and phrases are not italicized to so great a degree as formerly. Many of the best proof-readers use roman letters for every foreign word or phrase which appears as English in

any approved English dictionary. A few suggestive examples are herewith given: *ad valorem*, *alias*, *alibi*, *chapeau*, *charge d' affaires*, *debris*, *debut*, *ennui*, *facsimile*, *fete*, *naive*, *patois*, *per annum*, *per capita*, *post-mortem*, *pro rata*, *regime*, *rendezvous*, *role*, *savants*, *sobriquet*, *ultimatum*, *verbatim*, *vice versa*, *viva voce*.

The expressions *pro tem* and *per cent*, contractions of *pro tempore* and *per centum*, may be said to have become so fully a part of the English language as to require neither italic nor the period.

Unusual foreign expressions employed to convey precise description, should be printed in italic in the first instance, but repetitions of the word may be put in roman. The omission of the French accents in such words as *debris*, *regime*, *role*, is also common.

SCIENTIFIC TERMS

Names of diseases, as *angina pectoris*, *diabetes insipidus*, and of remedies, as *nux vomica*, require neither italics nor initial capitals.

Geological terms do not take italics nor capitals except when derived from proper names, in which case capitals must be used; as, *Devonian trilobites*, *Jurassic period*.

In zoology and botany, latinized names composed of two words are written in italic. The first word usually denotes the genus, and begins with a capital; as, *Rana esculenta*, *Arvicula amphibius*. If the second name is derived from that of a person or place, it too should begin with a capital; as, *Darlingtonia Californica*; otherwise it begins with a lower-case letter. When first used, all such words should be italicized. When repeated in the same article, the names of species continue in italics, but all the larger divisions are set in roman.

Writers on scientific subjects differ concerning the use of italics, but the above suggestions are supported by a majority of the best authorities.

AUTHOR AND BOOK

In the text of a book, pamphlet, or newspaper, in which reference is made to a writer and his work, roman is used for the name of the author and italic for the title of the book; as, George Eliot, *The Mill on the Floss*.

FOOT-NOTES

In foot-notes, and in a quotation that makes a full paragraph, the better form is to put the name of author and book in roman lower-case. At the end of a paragraph or foot-note in making reference to a book, the author's name is put in roman and the book in italic. If the book alone is given, use italic.

When reference is made in the body of the text or in foot-notes, to a newspaper or magazine, use roman lower-case, without quotation marks; as, the New York Herald. If placed at the end of a paragraph as a credit, use italics.

VARIANT USAGE

Some phrases, when used as adverbs, may be set in italics; when used as qualifiers of nouns, they are set in roman.

The Vice-president is, *ex officio*, the chairman.

An ex-officio member of the committee.

The evidence is, *prima facie*, conclusive.

Prima-facie evidence.

RUNNING COMMENTS

These are usually bracketed in the text and do not require to be italicized.

QUOTATION

Extracts and quotations that make two or more lines should be given a separate place or paragraph. If in the same type as the text, they should be set off by quotation marks; if in smaller type, with blank before and after, no quotation marks are needed.

One line with the pen drawn under the word or phrase indicates to the printer that the parts thus underlined are to be set in italic.

NUMERALS

BOOKS, NEWSPAPERS, AND CORRESPONDENCE

In books, magazines, and newspapers, and in general correspondence, figures and numbers should be avoided as much as possible. In dates, catalogues, trades lists, and wherever economy of space is important, they may be used. In commercial printing they are largely employed. In legal documents, and in all kinds of formal writing where great precision of statement is desired, figures and abbreviations should not be used. In social correspondence, except in dates, street numbers, etc., figures should be avoided.

QUANTITIES AND VALUES

Figures must not begin a sentence. Quantities are properly written in words, while values are expressed in figures, especially if the value involves fractions; as, ten yards of calico at $7\frac{1}{2}$ cents a yard. Degrees of temperature, records of votes or of time in a race, are usually expressed in figures, this custom being sanctioned by the best authorities, as:

The highest temperature last summer was 98 degrees.

The specific gravity of gold is 19.

The vote stood 50 yeas to 76 nays.

His best time was a mile in 2 minutes, $36\frac{1}{2}$ seconds.

The form \$500 is better than \$500.00. In tables containing columns for dollars and cents, the two ciphers are written to occupy what would otherwise be an unsightly vacant space.

FIGURES AND WORDS

A combination of figures and words is displeasing to the eye. The forms *a ten-foot pole*, *a twelve-story building*, are more sightly

than a 10-foot pole, a 12-story building. Where frequent repetition or comparison is necessary, figures make the subject more clear, and are usually preferred; as, 4-penny, 6-penny, and 10-penny nails; 8-point, 12-point, 24-point type.

DATES

When the day is placed before the month, retain the *st, d, th*; as, 10th May, 22d June; when placed after the month, omit these endings, as, May 10, 1896. The shorter forms 2d, 3d, are preferred to 2nd, 3rd.

LARGE NUMBERS

In the expression of large numbers consisting of four, five, six or more figures, it is an assistance to the eye to separate the number by commas into groups of three figures each. A number of four figures standing alone, as 7584, is better without a comma. A date, as 1776, should never be written with a comma.

HOUSE AND STREET NUMBERS

To distinguish between the number of the house and that of the street, the former is usually written in figures and the latter in words; as, 55 Fifth Street. If the street were indicated by a figure, it might be mistaken for 555th Street. The English custom of placing a comma after the house number is not observed in the United States. Where a distinction must be made between street and avenue, the avenue is written in words, and the street in figures; as, Third Avenue and 132d Street.

HOURS OF THE DAY

Two o'clock, half-past seven, or fifteen minutes before eight are more sightly than 2 o'clock, 7.30, 7.45. When figures are used, hours are separated from minutes by a period, and not by a colon. The forms o'clk, o'cl'k, and o'c should be avoided except where space absolutely prevents the use of the entire word.

DYNASTIES AND RULERS

Centuries, dynasties, and rulers are now usually expressed in words; as, the twentieth century, the sixteenth dynasty, Henry the Eighth, instead of, the XXth century, the XVIth dynasty, and Henry VIII.

PUNCTUATION

The roman numerals XX, VIII, XC, are not abbreviations any more than are 20, 8, 90, and do not require a period as a mark of abbreviation.

SYLLABICATION

There is no system of syllabication so perfect as to command universal adoption. Many English writers are governed by the junction of the constituent parts of consolidated words: geo logy, dia meter, pro position, typo graphic, cata strophe. This system is logical and etymological. Another system authorizes the division of a word after the vowel, when not inconsistent with pronunciation. This leads to such strained divisions as re co gnize, pre fe rence, cata stro phe, ca pa ci ty, com pa ti bi li ty. The orthoepical division separates the words into parts, with a view to bringing out the accented and unaccented syllables in conformity with the accepted forms of pronunciation. While this system is most widely followed in the United States, it is not without some disadvantages.

The compositor usually follows the dictionary used in his office, but the author or the proof-reader sometimes differs with the lexicographer, and the compositor is discomfited. The dictionaries unfortunately differ with one another and are not always consistent in their own practice.

PURPOSE OF DIVISION

Outside of dictionaries and spelling books, words are rarely divided except at the end of a line, where lack of space prevents

the completion of a word. The author, copyist, and typewriter encounter no special difficulty, since they are not required to observe a right-hand margin. They may complete a word at the end of a line or carry it over bodily to the next. The compositor, on the other hand, must make his lines of even length. His measure may not admit of more than a fourth or a half of a word. To carry all of the word over to the next line, especially if the word be lengthy or the measure narrow, would necessitate such wide spacing between the remaining words as to appear unsightly. To crowd all the word into the line would often make the line itself look like one long word. A division therefore becomes unavoidable.

PRINCIPLES OF DIVISION

When the division of a word become necessary, it should be made in accordance with recognized principles, so far as they are discoverable. The best general rule is that a word should be broken in writing or printing as it is divided in speaking. The American dictionaries aim to carry out this rule, and yet there are many differences among them.

TYPOGRAPHICAL DIVISIONS

The typographer's division aims to please the eye, as well as to satisfy the ear. It becomes apparent at the outset, therefore, that the speaker and the typographer will each have specific rules that will not apply to the other. The speaker utters every word by syllables. In ordinary book and newspaper composition, the typographer divides no word in the line, except, in some cases, the last, unless he encounters a chance hyphenated compound.

MONOSYLLABLES

Words of one syllable, even though they are long and the measure narrow, must not be divided. When words like *through*, *ground*, *brought*, occur in narrow columns, they often occasion trouble to the compositor.

SHORT SYLLABLES

Some good proof-readers, in order to prevent the carrying over or the leaving behind of a syllable consisting of one or two letters, forbid the division of such words as fasten, given, often, moisten, prayer, eleven, soften, listen, heaven. Many printing-houses follow the rule that in a measure of eighteen ems or more, a noun of one syllable which forms its plural by adding *s* (voices, verses, horses) must not be divided. In very narrow measure, this rule cannot be followed.

DIVISION BETWEEN CONSONANTS

When two consonants meet between two vowels, the division is generally made between the consonants: mar ket, mil lion, moun tain, for tune. When three consonants come together, the two that form the closer union in pronunciation are usually coupled: ac tress, pitch er, chil dren, trench er.

INFLUENCE OF ACCENT

A change of accent is often attended with a change in the division of a word: commend' able, commen da'tion; prod' uct, pro duc'tion; pro cure'ment, proc ura'tion.

DOUBLE CONSONANT

When the final consonant is doubled on taking a suffix, the separation occurs between the consonants: admit ted, concurrence; but if a double consonant ends the stem, the consonants are not divided: add ing, ebb ing, call ing, spell ing.

PREFIXES AND SUFFIXES

A prefix or a suffix forms a loose juncture with the stem to which it is attached, and usually affords a desirable point for division: dis appoint.ment, equi ponder ance, un answer able; but if such separation misrepresents the pronunciation, the word is differently divided: big amy, prov idence, trim eter.

-able, -al, -ant, -ent, -ive, -or, -ory, -ure.—These suffixes usually follow the rule laid down for -ed, -er, -ing.

-ar, -er.—In the coalescents *ar* and *er*, the *r* must not be separated from the vowel: par ent, fair est, gener al, aver age.

-cian, -sian, -tian.—These terminal syllables are not divided in printing and writing, and there is good authority for an unbroken syllable in pronunciation: magi cian, opti cian, physi cian, A sian, Per sian, Chris tian, gen tian. When *elysian* is pronounced with four syllables, it forms an exception.

-cial, -sial, -tial.—These suffixes are not divided: gla cial, spe cial, so cial, cru cial, offi cial, ambro sial, ini tial, pruden tial, nup tial. Some authorities divide *tial* in *bes ti al i ty*.

-cion, -sion, -tion.—In English words these terminal syllables are never divided: coer cion, suspi cion, inva sion, cohe sion, vaca tion, ora tion. With a view of preserving the sound of short *i*, many persons improperly place *s* in the ultimate in such words as deci sion, eli sion, deri sion, revi sion. The dictionaries (International, Standard, Worcester), while divided on many points, are unanimous in the division of words in this class. The Century does not show the division of the printed or written word.

-ceous, -cious, -scious, -tious.—These suffixes are long, and in the setting up of narrow measure, the compositor may find it difficult to avoid breaking them; but in printing, as in pronunciation, they should not be divided: ceta ceous, herba ceous, spa cious, deli cious, con scious, fac tious, cau tious.

-ed, -er, -ing.—The dictionaries are much at variance regarding the suffixes of verbs ending in silent *e*. The practice of the Standard is the most uniform, most consistent with its principles, and most easily followed; but is probably least in accord with current usage. According to this authority, nearly all verbs of this class join the terminal consonant or consonants with the suffix, as: bi-ter, -ting; deba-ted, -ting, -tor, -table; ag'ita-ted, -ting, -tive, -tor.

Webster's rule, if not quite so simple, is more in accordance with the best current usage, and his practice is seldom at variance

with his principles. Worcester's division is, in the main, in accord with the International.

Many verbs of one, two, three, four, or more syllables end in silent *e*. In monosyllables and in dissyllables of this class which have the accent on the ultimate, the *e* is dropped on taking the suffixes -ed, -er, -ing, the consonant remaining with the stem: dat' ed, quot' ed, comput' ed, recit' ed, bit' ing, dot' ing, adher' ing, implor' ing, smit' er, debat' er. While the primary accent remains unchanged, most of the other suffixes follow the same division: comput' able, recit' al, dot' ish. But with a change of accent, the consonant is carried over with the suffix, as: dis'pu tant, rep'u-table, com'pa rable.

When the accent falls upon the penult or antepenult, the consonant is carried over to the suffix: contrib'u ted, -ting, -ter, -table, -tor, -tory; illus'tra ted, -ting, -tive, -tor, -tory; antic'ipa ted, -ting, -tive, -tor, -tory.

-ee, -or.—Usage is greatly divided regarding the spelling of legal terms with the above endings. The consonant generally goes with the suffix: lega tee', les see', mortga gee', do' nor, guar'an tor. Exceptions are found in assign ee', consign ee', grant ee', for reasons which are obivous.

-geous, -gious, -geon, -gion.—The words coura geous, gor-geous, conta gious, sacrile gious, gud geon, sur geon, conta gion, re gion, illustrate the general use of these suffixes. The dictionaries are greatly at variance in the case of several words having such terminations. The Standard divides widge on, pig eon, gudg eon, relig ion, relig ious, litig ious, thus breaking the general rule. Worcester makes the same division, except in widg eon. The International preserves the suffixes unbroken, except in widg eon, bludg eon, where, in accordance with the general rule, every reason seems to point to the division between the two consonants: dun geon, sur geon, stur geon. If it be argued that the accented vowel would suffer a change by dividing, as in reli gion, pi geon, reli gious, liti gious, the reply is that the *g* sound would be more likely to suffer a change if transferred to the penult. The

accented vowel is in no greater danger in the above words than it is in scores of others whose division is never questioned, as: na tional, spe cial, judi cial, offi cial, suspi cious, nutri tious.

-le.—When the terminal *-le* is preceded by a single consonant or consonant digraph, the dictionaries are much at variance regarding the division of the word. The International writes trou ble, spec kle, tic kle, buc kle, cou ple; the Standard makes the division before the *l*, as, troub le, speck le, etc. The compositor will find the former division a convenience, especially in narrow measure, but the latter is more in harmony with pronunciation.

SHORT AFFIXES

Other short prefixes, as in-, en-, ex-, ad-, af-, on-, de-, and suffixes, as, -al, -an, -on, -ly, should not be separated from the stem. This is especially true of -ed when it is sounded with the main part of the word in one syllable, as, looked, slaked, tacked, passed. Some good proof-readers protest against separating the suffixes -ed, -er, and -ing when preceded by a double consonant, as, combat ted, -ting; fit ter, -test; glad der, -dest.

BASIS OF DIVISION

In writing, there is little occasion for the division of words except when they are very long. In printing, custom, taste, and convenience alike require that the right, as well as the left margin shall be observed. Custom requires also that words shall be broken according to certain principles. The most general principle is that the printed word shall be divided according to its syllabication in speech. But the material substance of spoken words is sound—fleeting, volatile, difficult to grasp, and more difficult to harness—hence the diversity of usage among those who syllabize according to pronunciation.

SPACING

The beauty of a printed page depends, in no small degree, upon the spaces between its words. In a wide column or page it is an

easy matter for the compositor to adjust his spaces without violation of the principles of division; but in narrow measure it is often a question whether good taste is not better conserved by an equalization of the spaces than by a strict adherence to the rules of division of the word at the end of the line.

In the present unsettled usage, the compositor might be pardoned for dividing the word according to his space; as, trou ble or troub le, buc kle or buck le, reli gion or relig ion. Since many words admit of two spellings or two forms of pronunciation, he may, with the greater propriety, claim such privilege. Different divisions of the same word, however, should not occur in the same paragraph or page.

WIDE MEASURE

In wide measure, the taste and judgment must determine, in a large degree, where to break the word. Some authors claim that the first part of a broken word must always be long enough to suggest the word. This is not practicable in narrow measure, and would be found inconsistent with good spacing even in wide measure. But one or two letters should not be separated from the rest of the word either at the beginning or at the end. Such words as eleven, given, heaven, horses, often, striven, voices, verses, over, able, avow, amen, and many others, should not be separated when it is possible to avoid it.

GOOD JUDGMENT

Despite all that has been said regarding the division of words, it is impossible to construct rules that will cover all cases. The junction between a prefix or suffix and the stem is less close than between the syllables of the stem itself, and will often serve as the best place for division. Dis infect, dis organize, dis avow, disagree, in humanity, un able, service able, are better divisions than disin fect, disor ganize, disa vow, disa gree, inhu manity, una ble, servicea ble.

COMPOUND WORDS

Compound words, whether hyphenated or consolidated, when occurring at the end of a line, should be broken between the elements of the compound, and not between the syllables of one of their parts; as, twenty-one, fellow-creatures, apple-tree, cottonseed; not twen-tyone, fel-lowcreature, ap-pletree, cot-tonseed.

PROPER NAMES

Proper names should not be divided when it is possible to avoid it. The setting of Theo- at the end of a line, or even the whole word Theodore, does not look so well as the full name Theodore Roosevelt on one line; but in the adjustment of such a matter, the author's assistance may be necessary. A word may have to be added or omitted to bring the two parts of the name on the same line.

NUMBERS

Like proper names, numbers, when broken at the end of a line, are awkward. Dates must never be broken (1492, 1776, 1904), and are read in hundreds. Large numbers other than dates are pointed off in groups of three figures, and when divided at the end of a line, must be separated between the groups, as, 4, 396, 718, 425. Decimals are pointed off from the decimal point toward the right, and should be divided in the same way as whole numbers. A number consisting of less than six figures should not be divided.

DISPLAY LINES

In the title-page, words of bold display should not be divided. Subtitles and summaries in small capitals may be divided. In eccentric composition, as in the setting of a square or rectangular title, a word is often divided in the middle of a syllable, even without the formality of a hyphen.

A subheading of two lines should not break a word if it is possible to throw the full word into the second line.

COMPOUND WORDS

GUIDING PRINCIPLES

The absence of any satisfactory guiding principles in the compounding of words is apparent to all who have sought information in this department. Mr. F. Horace Teall has probably made a more careful and exhaustive study of the subject than any other writer. To illustrate a fundamental principle in compounding, he uses the following: an *iron fence* is a fence made of iron; an *iron-saw* is a saw intended to cut or saw iron; and *ironwood* is the name of a tree whose wood is intensely hard. The manner of combining these words brings out the distinction in meaning, and shows how clearness of thought is often dependent upon a proper compounding of words. In like manner *Aaron's beard* signifies the beard of Aaron, while *Aaron's-beard* is the name of a plant.

When railroads and steamboats first came into use, *rail* and *road*, *steam* and *boat*, were written as separate words. After a time they were combined with a hyphen; later they were consolidated. Many compounds, both hyphenated and consolidated, have undergone, and others are now undergoing, a similar change.

Usage is the law of language. When it is uniform and fully established, there is no appeal. But usage should be founded on principle. Where it is greatly varied, the principle should be applied, and the best usage secured and made general. In several of the later dictionaries, an attempt has been made, in all cases of unsettled usage, to establish a guiding principle, and to make

the varying forms employed by printers, proof-readers, stenographers, and writers conform to it. The best current usage is represented in the body of this work. The following suggestions will prove helpful.

POINTS OF THE COMPASS

Points of the compass, as, northeast, southeast, are better written without a hyphen. When the first part is repeated, the hyphen is required, as in south-southeast.

NUMERALS

Fractions and numerals, as, one half, two thirds, ten thousand, need no hyphen unless combined to qualify a noun; as, one-half interest. If the fraction is complex, as in five sixty-thirds, one hundred and twelve ten-thousandths, the hyphen is needed, also in the specification of numbered streets, as Seventy-fifth Street, One-hundred-and-twenty-eighth Street. Compounds with half, quarter, etc., are generally joined with a hyphen, as, half-crown, half-yearly, quarter-dollar, quarter-section. Numerals of one syllable prefixed to fold, penny, pence, score, are consolidated, as in fourfold, halfpence, sixpenny; but if the numeral contains two or more syllables, it is written as a separate word, as thirty fold, fifteen pence, twenty score. When used as an adjective qualifier, as in fourteen-penny tax, the hyphen may be used. First-rate, second-rate, and similar terms, are compounded. First-lieutenant, second-mate, when used as adjective qualifiers, are compounded; as, Second-lieutenant Brown. Numerals helping to form adjective qualifiers are followed with the hyphen; as, a four-story house, a ten-acre lot.

KINDRED

Words of kinship in frequent use, if short and closely united in thought, are consolidated; as, grandfather, godmother, stepson. Longer forms and those in less common use take the hyphen;

as, foster-brother, great-grandfather, mother-in-law, great-aunt, second-cousin, grand-uncle.

TITLES

Military and civil titles require the hyphen; as, Major-general, Lieutenant-colonel, Vice-president. Viceroy and Viceregent are consolidated.

DESCRIPTIVE COMPOUNDS

Brief descriptive compounds, as long-haired, blue-eyed, broad-shouldered, sharp-nosed, require the hyphen.

COLORS

Silver-gray, olive-green, and similar compounds, take the hyphen; but reddish brown, yellowish white, etc., are separate words.

POSSESSIVE CASE

Forms like crow's-nest, bird's-eye, jew's-harp, have good authority; but the tendency of the best writers and printers is toward the unbroken word; as, ratsbane, beeswax, townspeople.

SCHOOL

As the initial word, school is consolidated in schoolboy, schoolmate, schoolmistress. It is hyphenated in school-bred, school-teaching, when used to qualify a noun. It is a separate word in school children, school teacher, school days, school district.

As the second word of the compound, the word school is generally written separately, as Normal School, High School. In Sabbath-school and Sunday-school, usage varies, some authorities writing the words separately.

SHORT WORDS

Compounds whose constituent parts are short, especially if in common use, are usually consolidated.

out-, over-, under-.—These prefixes are usually written with-

out the hyphen, unless the second part consists of two or more syllables.

extra-, non-, sub-, semi-, demi-.—These are compounded without a hyphen unless the combination is unusual.

above-, ill-, so-, well-.—When these prefixes precede a participle, and the compound is used as a qualifier, the hyphen is usually employed; as, above-named, ill-bred, well-formed, so-called.

self-.—Most compounds beginning with self- require the hyphen; as, self-assertion, self-conceit, self-conscious. Those ending with -self are consolidated; as, myself, itself, oneseif.

mid-.—Words in common use beginning with mid- require no hyphen; as midday, midnight, midsummer. Those in less common use take the hyphen; as, mid-heaven, mid-ocean.

pre-, re-.—When followed by a word beginning with *e*, the hyphen instead of the dieresis is often employed; as, pre-empt, pre-engage, re-enter, re-echo. To distinguish between words of different meaning, as in rec ollect, re-collect, rec ommend, re-com-mend, the hyphen must be employed. Pre-adamite, pre-raphaelite, pre-occupy pre-historic, and similar expressions take the hyphen.

-like.—Compounds ending in -like, especially if short or in common use, are written as one word, as lifelike, childlike. To avoid an unpleasant combination of letters, a hyphen is employed in the words bell-like, shell-like, etc.

-fish, -bird.—A convenient rule for compounds ending in -fish, -bird, and one on which careful writers are generally agreed, is to consolidate when the first part consists of only one syllable, and to hyphenate when it consists of two or more syllables; as, dogfish, bluefish, swordfish, harvest-fish, ribbon-fish, blackbird, bluebird, reedbird, humming-bird, tailor-bird. In rare and unusual compounds, the hyphen is employed even when the parts are monosyllables.

-tree, -wort.—Words compounded with -tree usually take the hyphen; those with -wort omit the hyphen: apple-tree, lemon-tree, pear-tree, milkwort, thoroughwort.

-man, -woman.—Compound words ending in -man or -woman are generally consolidated; as in warehouseman, workingman, marketwoman, needlewoman.

any, every.—These words are usually consolidated; as, *anybody, anything, everywhere*, but *any one, every one*, are written as separate words.

T rail, T square, U bolt, U tube, V gage, V gear, and similar expressions are usually written as separate words.

PHRASES

After a while, by and by, it may be, by the bye, ever to be remembered, in no wise, in the meantime, long looked for, uncalled for, and many similar phrases are best written as separate words. *Good day, good night, good by*, are also written as separate words, except when used as adjective qualifiers; as, *a good-night kiss, a good-day greeting*.

PUNCTUATION

PRIMARY PURPOSE

The student of punctuation will not have proceeded far in his studies without discovering that this branch of learning has not yet reached the condition of an exact science. Different writers interpret and apply the rules differently. Nor can these rules be applied strictly alike to all kinds of writing. Poems and trades lists, sermons and market reports, cannot be punctuated by the same codes. Different systems prevail in different publishing houses. Authors, editors, and proof-readers have opinions of their own, and do not always defer to the grammarians, and the lot of the compositor is often a trying one.

Remembering that the primary purpose of punctuation is to make the meaning more clear, it is a safe general rule to omit any marks whose use will not promote this purpose. A sentence may

be long and yet so clear as to require no points. Another, though comparatively short, may be so involved as to require a number of them. Some writers punctuate very closely and precisely, while others write carelessly and with great lack of uniformity in regard to punctuation.

GENERAL TENDENCY

The general tendency is toward the use of fewer points than were formerly considered necessary, especially in ordinary descriptive writing, but in composition of legal and ecclesiastical matter, and in precise composition of every kind, the strictest rules of punctuation must be observed. By the careless insertion of a comma instead of a hyphen in the official printing of an enactment of Congress, certain articles which should have paid duty were imported free, with a resulting loss of thousands of dollars to the Government.

A careful observance of the usage of good writers and proof-readers, as illustrated in well-edited books, magazines, and newspapers, will prove a valuable study in punctuation.

DUTY OF THE COMPOSITOR

All persons who prepare copy for the press should understand and apply the rules of punctuation. But so long as manuscripts are presented without comma or period, or with the dash used indiscriminately for every other mark, there will be something for the compositor to do. It is his duty, in every case, to try to make composition intelligible, so far as it can be done by the proper use of points.

GRAMMAR AND PUNCTUATION

The use of points is so largely dependent upon a knowledge of sentence-structure, that the study of grammar should precede that of punctuation. Just as the book is made up of chapters, sections, paragraphs, and sentences, so the sentence is composed of members or clauses, phrases, and words.

The purpose of this volume forbids an extended discussion of the grammatical principles underlying the structure of the sentence, but a few simple definitions with illustrations are herewith presented.

SENTENCES

A sentence is a combination of words so arranged as to make complete sense.

- 1 The wise man throws himself on the side of his assailants.
- 2 Are the stars mere decorations of the night?
- 3 How often does an unseen hand shift the scenes of life!
- 4 Consider the sad consequences of a misspent life.

These four sentences are called respectively, Declarative, Interrogative, Exclamatory, Imperative.

According to their structure, sentences are classified as Simple, Complex, and Compound. A simple sentence represents a single statement, and contains one subject and one predicate. The foregoing are examples of the simple sentence.

A compound sentence consists of two or more simple sentences connected. The parts are called members and are independent of each other.

- 1 Columbus discovered a new world, and Americus Vesputius gave it a name.
- 2 The wind blew furiously, and the waves dashed high.
- 3 To err is human; to forgive, divine.

These are examples of a compound sentence. By some grammarians, the members are called independent clauses.

A complex sentence is one composed of a principal clause and one or more dependent clauses. Examples:

- 1 Fools rush in *where angels fear to tread*.
- 2 *When the morning dawned*, all doubts were dispelled.
- 3 Hannibal was the deadliest foe *that Rome ever had*.

The subordinate or dependent clauses are in italics. It will be observed that each member or clause has a subject and a predicate.

A phrase is a group of two or more words which usually perform the office of an adjective or an adverb.

- 1 All men admire an act *of heroism*.
- 2 Dewey won a great victory *at Manila*.
- 3 He writes *with great rapidity*.

COMPOUND SENTENCES

- 1 John learned a trade and Henry went to college.
- 2 The wind blew furiously, and the waves dashed high.
- 3 The policeman ran swiftly, but the thief escaped.

In the first of the foregoing sentences, no comma is needed because the members are short, of equal rank, and independent. In each of the others, the second statement follows as a consequence of a condition expressed in the first, and a comma is employed.

RESTRICTIVE CLAUSES

- 1 The diamond *that I lost* was a Christmas gift.
- 2 The diamond, which is pure carbon, is a brilliant gem.
- 3 No thought, of which good sense is not the groundwork, can be just.

In the first sentence, the clause *that I lost* restricts *diamond* to the one lost, and requires no comma. In the second, the subordinate clause is non-restrictive, and must be set off by commas. When the subordinate clause, even if restrictive, is introduced by *of which* or *of whom*, the comma is necessary.

ADJECTIVE AND ADVERB CLAUSES

When these clauses are restrictive, they follow the rule for restrictive clauses.

- 1 I plucked the peaches *that were ripe*.
- 2 I plucked the peaches, *which were ripe*.
- 3 Youth is the time *when character is formed*.
- 4 Solomon, *who built the temple*, was the son of David.

In the first sentence, only the ripe peaches were plucked; in the second, all were ripe and all were plucked. It will be observed

that the junction of the non-restrictive, or supplementary, clauses in the second and fourth sentences is not so close as that of the restrictive clauses in the first and third.

PHRASES

- 1 The guide standing on the rock is looking toward us.
- 2 The guide, standing on the rock, reached out his hand to save us.
- 3 The old baron sat, on one cold night, in a small room, before the empty grate.
- 4 We went from Philadelphia to New York in two hours.

Participial phrases, when not restrictive, are set off with commas. When more than two adverb phrases modify the same word, they are pointed off with commas; but, if the phrases are short and the sentence clear, as in the fourth example, no comma is required.

SERIES

Words, phrases, and clauses, alike in character or construction, and arranged in a series, are separated by commas.

- 1 Industry, honesty, and temperance are essential to happiness.
- 2 Industry, honesty, temperance, are cardinal virtues.
- 3 Alfred the Great was a grave, pious, and patriotic prince.
- 4 The address was eloquently, forcibly, and beautifully delivered.
- 5 Beauty is seen alike in leaf, in bud, in flower, in fruit, in tree.
- 6 It is education that enlarges our minds, that corrects our opinions, that broadens our views, and that renders us more useful.
- 7 A beautiful white lily grew in the garden.
- 8 Long, difficult, pious pilgrimages were made to Mecca.

Many persons make the mistake of omitting the comma before *and* which connects the last two words of the series; as in the first, third, and fourth sentences. In the second sentence, the omission of *and* makes it necessary to use the comma before the verb. The adjective modifiers in the seventh sentence require no comma of separation because they are not in the same construction. The word *white* modifies *lily*, and *beautiful* modifies the expression *white lily*. Compare this with the eighth sentence.

PAIRS

Words or phrases arranged in pairs take a comma after each pair.

- 1 Poverty and distress, desolation and ruin, anarchy and confusion, follow civil war.
- 2 He shot or hanged, imprisoned or exiled, the troublesome insurgents.
- 3 Cotton grows in Egypt and in India, in Brazil and in the United States.

INTERJECTED EXPRESSIONS

Such expressions as *however, indeed, perhaps, therefore, in fact, in truth, by the way, according to his own statement*, when interjected between the parts of a sentence, are somewhat parenthetical in character, and are usually set off by commas.

- 1 He promised, however, to reform at once.
- 2 The whole town, in fact, was aroused by the noise.
- 3 This book is, generally speaking, better than the other.

INTRODUCTORY EXPRESSIONS

Intröductory expressions, which show a connection between the sentence and something preceding, are set off by commas, as:

- 1 Moreover, he hath left you all his walks.
- 2 Lastly, what lay you to their charge?

The words *whereas* and *resolved*, used in connection with a series of resolutions, are generally, but needlessly, set off by commas.

ELLIPSIS

The comma is often employed to denote the omission of a word.

- 1 The stern and rigid Puritans worshiped here.
- 2 The stern, rigid Puritans worshiped here.
- 3 The sun and the moon and the stars revolve.
- 4 The sun, the moon, and the stars revolve.
- 5 The sun, the moon, the stars, revolve.
- 6 From law arises security; from security, inquiry; from inquiry, knowledge.
- 7 From law arises security; from security inquiry; from inquiry knowledge.
- 8 Homer was the greater genius; Virgil the better artist.

- 9 Reading maketh a full man; conference a ready man; writing an exact man.

While the sixth sentence illustrates the rule, and is in accord with former usage, the closeness of construction, as exemplified in the last three sentences, justifies the omission of the comma, and illustrates the practice of many good writers and proof-readers of today.

INVERSION

Words and phrases out of their natural order are set off by commas.

- 1 Abraham Lincoln was our first martyred president.
- 2 Garfield, James A., was our second martyred president.
- 3 Heaven hides the book of fate from all creatures.
- 4 Heaven, from all creatures, hides the book of fate.
- 5 In the dead of night, with a chosen band, under cover of a truce, he approached.
- 6 Between the two mountains lies a fertile valley.
- 7 He who leads the most pious life preaches most eloquently.
- 8 He preaches most eloquently, who leads the most pious life.

When the connection is close, and there is no break in the thought, as in the sixth sentence, no comma is needed.

NOUNS INDEPENDENT, APPOSITIVE, OR VOCATIVE

- 1 Henry, will you close the door?
- 2 Paul the Apostle was a man of energy.
- 3 Paul, the great Apostle of the Gentiles, was a prolific writer.
- 4 Noah Porter, D.D., LL.D., was an eminent scholar.
- 5 They elected him Governor of Ohio.
- 6 I rise, Mr. President, to a point of order.
- 7 The puma, or American lion, inhabits South America.

The noun independent, as in the first sentence, requires a comma. When the appositive noun stands in close relation to the noun to which it belongs, as in the second sentence, no comma is required. Titles, as in the fourth sentence, are usually considered as part of the name, but are really nouns in apposition and are separated by commas.

CLEARNESS

A comma should be used whenever the sense would not be clear without it.

- 1 They landed and killed fifty Indians.
- 2 They landed, and killed fifty Indians.
- 3 Elizabeth's favorite Raleigh was beheaded.
- 4 Elizabeth's favorite, Raleigh, was beheaded.
- 5 Bennett's daughter Mary attended college.
- 6 Bennett's daughter, Mary, attended college.
- 7 He went skating because he was told to go.
- 8 He did not go skating, because he was not told to go.
- 9 The prisoner said the witness was a notorious burglar.
- 10 The prisoner, said the witness, was a notorious burglar.
- 11 That the Governor of this great State of Illinois should make this unworthy appeal to the passions and prejudices of the foreign-born citizens of the nation must always be a cause of mortification to every lover of his country.
- 12 It remains, perhaps, to be said, that, if any lesson at all, as to these delicate matters, is needed, in this period, it is not so much a lesson,

An examination of the first ten sentences will show the difference in meaning produced by the presence of the comma. The eleventh illustrates the fact that a long nominative does not always require a comma after it. The twelfth is an example of a sentence greatly overburdened by commas; a better punctuation would retain the comma after *that*, *period*, and *lesson*, and omit the rest.

QUOTATIONS

A short quotation, or a sentence resembling a quotation, is usually preceded by a comma.

- 1 Patrick Henry began his celebrated speech by saying, "It is natural to indulge in the illusions of hope."
- 2 A good rule in education is, Learn to be slow in forming your opinions.
- 3 Nathan said to David, "Thou art the man."
- 4 Nathan's words to David were these: "Thou art the man."
- 5 Cain asked, "Am I my brother's keeper?"
- 6 Cain asked whether he was his brother's keeper.

THE COMMA

The most frequently used, and probably the most abused mark of punctuation, is the comma. Dean Alford declares that it is the great enemy to understanding anything printed in our language. He condemns the unthinking, mechanical use of this point by compositors, and expresses satisfaction in the reflection that, in the course of editing the Greek text of the New Testament, he destroyed more than a thousand commas which, if allowed to remain, would have prevented the text from being properly understood.

SEMICOLON

The semicolon marks a more decided break in the sentence than that indicated by a comma. It serves also to prevent a repetition of the comma when the divisions are numerous and somewhat similar in character. It is usually found in long sentences, but may be needed in short ones.

LOOSE JUNCTION

Parts of a sentence loosely connected in meaning are separated by semicolons.

- 1 Wisdom is the principal thing; therefore get wisdom; and with all thy getting, get understanding.
- 2 Everything grows old; everything passes away; everything disappears.

MAJOR AND MINOR DIVISIONS

When the comma is used for the small divisions, the larger generally require the semicolon.

- 1 And now abideth faith, hope, charity; but the greatest of these is charity.
- 2 It may cost treasure, and it may cost blood; but it will stand, and it will richly compensate for both.

COMMON DEPENDENCE

Clauses or phrases having a common dependence upon some other clause or word are separated from each other by a semicolon.

- 1 Here let us resolve that they shall not have died in vain; that this nation shall, under God, have a new birth of freedom; and that government of the people, by the people, and for the people, shall not perish from the earth.
- 2 Philosophers assert, that Nature is unlimited in her operations; that she has inexhaustible treasures in reserve; that knowledge will always be progressive; and that all future generations will continue to make discoveries.
- 3 That Nature is unlimited in her operations; that she has inexhaustible treasures in reserve; that knowledge will always be progressive; and that all future generations will continue to make discoveries: these are among the assertions of philosophers.

The formal structure of the third sentence requires the colon near the close.

EXPLANATION

When a member of a sentence is added for the sake of contrast, inference, or explanation, the semicolon is used to separate it from the preceding member.

- 1 The world will little note nor long remember what we say here; but it can never forget what they did here.
- 2 Apply yourself to study; for it will redound to your honor.
- 3 The ground is wet; it must have rained last night.

PARTICULARS

When such expressions as *namely*, *as*, *viz.*, *i. e.*, *that is*, precede an example or a specification of particulars, the semicolon is usually placed before the introductory word and the comma after.

- 1 Five great enemies are constantly harassing us; namely, ambition, avarice, anger, envy, and pride.
- 2 Some words are spelled in two ways; as, inquire, enquire; skeptic, sceptic; bazar, bazaar.
- 3 Adjective pronouns are divided into three classes; distributive, demonstrative, and indefinite.
- 4 Adjective pronouns are divided into three classes: first, the distributive, which are four in number; second, the demonstrative, which are also four in number; and third, the indefinite, of which there are nine.

- 5 The following officers were elected: Henry Brown, President; John Jones, Vice-president; Samuel Smith, Secretary; and Thomas Reed, Treasurer.
- 6 Wisdom hath builded her house; she hath hewn out her seven pillars; she hath killed her beasts; she hath mingled her wine; she hath furnished her table.
- 7 Wisdom hath builded her house, hewn out her seven pillars, killed her beasts, mingled her wine, and furnished her table.

The introductory word is sometimes omitted, as in the third example. When the parts are somewhat formally introduced, or contain commas, the colon follows the general statement, and the semicolon separates the particulars, as in the fourth and fifth sentences. The close connection of the parts in the seventh sentence justifies the use of the comma.

If the particulars or illustrations introduced by *as* are given a separate line, many good writers and proof-readers place a comma before *as* and a colon after, as:

I eat to live; you live to eat.

But if *as* is followed by *in*, the closer connection justifies the use of the comma alone, as in,

To err is human; to forgive, divine.

THE COLON

When the minor divisions of a sentence are separated by semicolons, the greater division requires the colon.

- 1 Art has been to me its own exceeding great reward: it has soothed my afflictions; it has refined my enjoyments; it has endeared solitude; and it has given me the habit of wishing to discover the good and the beautiful in all that surrounds me.
- 2 Among those present were: Charles Wright, who made an address; Silas Carey, with his wife and daughters; and James Brown, Secretary of the Association.
- 3 Among those present were Charles Wright, Silas Carey, and James Brown.

The colon serves as the hinge upon which the sentence turns.

INFERENCE

A clause, complete in itself, and followed by some remark, inference, or illustration, not connected with the clause by a conjunction, requires a colon.

- 1 Avoid affectation: it is a contemptible weakness.
- 2 Avoid affectation; for it is a contemptible weakness.

A colon is sometimes used before a direct quotation, when incorporated in the body of the sentence.

- 1 Holmes says: Sin has many tools, but a lie is the handle that fits them all.

The quotation marks, although often employed in such sentences, are unnecessary here.

TITLE-PAGES

- 1 English Grammar: An Exposition of the Principles of the English Language.
- 2 English Grammar; or An Exposition of the Principles of the English Language.
- 3 Philadelphia: George W. Jacobs and Company, 1904.

The subtitle, when connected with the main title by *or*, is usually preceded by a semicolon; when *or* is omitted, the colon is used. Modern taste forbids, on a title-page, the use of any points that can possibly be omitted. The principles of punctuation, as applied to the text of a book, are almost wholly disregarded here.

SALUTATION

It is customary to put a colon after the complimentary salutation in a letter or an address, as:

Dear Sir: My dear Madam: Gentlemen:

The use of this mark is the most logical, and is preferable to the semicolon or to the comma followed by the dash.

FORMAL INTRODUCTORY WORDS

The more formal introductory words, *to wit*, *as follows*, *the*

following, for example, this, and these, are usually followed by the colon.

THE PERIOD

The period should follow every declarative and imperative sentence, and every abbreviation. It separates whole numbers from their decimal fractions, and is now generally employed instead of the colon, to separate hours from minutes in the time-tables and railway guides.

It should follow a signature to a letter or other document, and a name when standing alone; but names printed in columns require no punctuation.

The period is not needed after a figure or figures used at the beginning of paragraphs, or to number verses or other subdivisions in poetry.

Usage is divided regarding the roman numerals in chapters of books and in kingly titles. The later custom omits the period after the numeral, and many good writers and proof-readers omit the word *chapter*.

William I made many mistakes.

Louis II ascended the throne at the age of fifty.

Unless care is exercised in the writing, the first might be read: William, I made many mistakes; the second: Louis, the eleventh, ascended the throne at the age of fifty.

THE DASH

While this mark has been much overworked, and has been made a convenient cover for ignorance, it has its legitimate sphere, which should be understood.

ABRUPT CHANGE IN STATEMENT

A sudden break in a statement is usually marked by a dash.

¹ Thus the plot thickens—but I weary you.

² He had no malice in his mind—no ruffles on his shirt.

- 3 You have given the command to a person of illustrious birth, of ancient family, of innumerable statues—but of no experience.
- 4 They yield—they break—they fly—
They faint—they fall—they die.

The third and fourth sentences illustrate a break that is more largely elocutionary than one of grammatical construction.

CONCLUDING CLAUSE

A concluding clause upon which several other expressions depend is usually preceded by a dash.

- 1 He was witty, learned, industrious, plausible—everything but honest.
- 2 The great men of Rome, her beautiful legends, her history, the height to which she rose, and the depth to which she fell—these make up one-half of a student's ideal world.

PARENTHESIS

Parenthetical expressions are sometimes included between dashes.

- 1 The smile of a child—always so ready when there is no distress, and so soon returning when the distress has passed—is like an opening of the sky, showing heaven beyond.
- 2 The ideal forms of things without—if not in a metaphysical sense, yet in a moral sense—exist within us.
- 3 Religion—who can doubt it?—is the noblest theme for contemplation.

The reason for using the interrogation point with the dash in the third sentence is apparent.

OMISSION

The omission of letters or figures is indicated by a dash, as:
He was minister to B—a, 1900—1904.

ITERATION

The rhetorical repetition of an expression requires the employment of a dash, as in,

Shall I, who was born in the tent of my father, amid the roar and din of battle—shall I, the conqueror of Spain and Gaul—shall I compare myself with this half-year captain?

This form of speech is called the *Echo*.

SIDE-HEADS

The dash is often placed between the period following the side-head, and the text, when both occur on the same line. It serves also to connect the text with the name of the writer, at the close. Some good proof-readers now omit it in both cases.

THE INTERROGATION

A direct question is followed by the interrogation point. An indirect question is one that is merely mentioned or spoken of, and does not require an answer.

- 1 Why do you punctuate in this manner?
- 2 He asked why you punctuate in this manner.
- 3 He asked, Why do you punctuate in this manner?
- 4 Shall a man obtain the favor of heaven by impiety? by murder? by falsehood? by theft?
- 5 A man cannot obtain the favor of heaven by impiety, by murder, by falsehood, by theft.
- 6 Where be your gibes now; your gambols; your songs; your flashes of merriment, that were wont to set the table in a roar?
- 7 Where be now those things of yours that were wont to set the table in a roar?—your gibes? your gambols? your songs? your flashes of merriment?
- 8 You will grant my request?
- 9 He asked, May I go to college, and met with his father's refusal.

When the interrogation point marks a degree of separation equal to a period, it must be followed by a capital letter. In a series of questions, as in the fourth example, where no reply intervenes, a lower-case letter follows. By changing the interrogation to an affirmation, as in the fifth sentence, the separative value of the interrogation point may be determined.

When several questions have a common dependence upon a concluding clause, but one question mark is employed; but if the particulars come last, each question requires a sign, as in the seventh sentence.

A sentence, declarative in form but interrogative in spirit, takes

the question mark; as in the eighth example. In the last sentence, many writers would place a question mark after the word *college*, but as the words are simply descriptive, the comma is sufficient. If the clause were lengthy or involved, quotation marks might be necessary.

THE EXCLAMATION

In point of separation, this mark is usually equivalent to a period; but, like the interrogation, it may be equivalent to a comma, a semicolon, or a colon. Like the dash, it is much overworked. Its purpose is to express surprise, emotion, ardent wish, admiration, or contempt. It usually follows an interjection.

- 1 What a piece of work is man! how noble in reason! how infinite in faculties! in form and moving how express and admirable! in action how like an angel! in apprehension how like a god!
- 2 Alas, poor Yoric!
- 3 Behold the daughter of Innocence!
- 4 Down, soothless insulter! I trust not the tale.
- 5 Charge, Chester, charge! on, Stanley, on!
- 6 When, O my countrymen! will you begin to exert your power?
- 7 Bah! that's the third umbrella gone since Christmas.
- 8 Fie, fie, fie! how silly you are!
- 9 You thought you would not be found out, eh?
- 10 That man virtuous!! You might as well try to tell me of the virtue of Judas Iscariot!!
- 11 O men of Athens! my honor prompts me to speak.
- 12 Oh, the bloodiest picture in the book of time!

The position of the exclamation is sometimes a matter of doubt. It should be placed at the end of the exclamatory word or phrase; but if the exclamatory idea extends through the sentence, it is placed at the end of the sentence.

When an interjection is repeated, a comma usually occurs between them, and the exclamation is placed after the last. The interjections *eh* and *hey* often take the form of a question, and should be followed by the interrogation. To illustrate intense emotion, the double exclamation is employed.

Many good writers limit O to the vocative address, placing the

exclamation after the phrase which it introduces, and employ *oh* to express emotion.

Properly used, the exclamation point imparts life and force to language; when used to excess, it transforms pathos into bombast, and admiration into ridicule.

THE APOSTROPHE

The chief use of the apostrophe is to indicate the possessive case of nouns, and to denote the contraction of words. To form the possessive, the apostrophe is placed before the *s* except in the case of nouns whose plural is formed by adding *s* or *es* to the singular. Contractions are formed in a variety of ways.

- 1 A man's hat. A boy's cap. A wolf's den. The men's hats. Five boys' caps. The wolves' dens. James's coat. Brooks's store. For conscience' sake. Hughes's farm. Moses's law. Moses' law.
- 2 I'll go, for I've purchased my tickets.
- 3 He'll tell 'em 't was 'twixt two an' four.
- 4 They were filled with the spirit of '76.
- 5 Dot your i's and cross your t's.
- 6 Make your 5's and 8's more distinct.

To avoid the unpleasant sibilant, many writers omit *s* after the apostrophe in *Moses' law*, *for conscience' sake*, *for goodness' sake*, and similar cases.

The apostrophe must not be used to form the possessive of the personal pronouns. Such errors as *her's*, *it's*, *our's*, *your's*, *their's*, are sometimes seen in the letters of inexperienced stenographers.

The possessive of *company* should rarely be abbreviated. The form *Co's* may be tolerated in narrow measure, but *Company's* is preferable.

TWO POINTS

There is seldom need to use two points together. The greater covers the less. The combination is usually offensive to the eye. If, in any case, the meaning should be obscured by the omission of the inferior mark, appearance must be sacrificed to clearness.

- 1 He reached the station at 6 p.m. but the train had gone.
- 2 He reached the station at 6 p.m., but the train had gone.
- 3 Greece, Carthage, Rome—where are they?
- 4 Greece, Carthage, Rome,—where are they?

A comma may follow, but should not precede, a mark of parenthesis. When a complete sentence is enclosed, the period is placed before the closing mark of parenthesis. If only a few words are enclosed at the end of the sentence, the period should come after the last mark of parenthesis.

A comparison of the late with the early editions of the English classics shows the growing tendency to use fewer points.

QUOTATION MARKS

Marks of quotation are employed to separate the exact words of another when embodied within the text of a sentence. This does not apply to the many phrases from the Bible, and from Shakspeare, Milton, and other famous writers, which, by their terseness and frequent use, have become a part of the coinage of the English language.

When the quoted extract consists of several paragraphs, the initial quote-mark is placed at the beginning of each paragraph, but the closing mark is used only at the end of the extract. If the several paragraphs are taken from different parts of the book or essay, each paragraph should begin and end with quote-marks. If the quotation is made up of several detached portions, the fact that the extracts are not continuous is indicated by the insertion of four or five successive periods separated by spaces between the several extracts.

The former custom of placing the initial quote-mark at the beginning of each line in a lengthy quotation is sometimes seen in the columns of newspapers, but is no longer employed in good book-work. The limit or extent of the extract is made manifest to the eye by narrower measure, by smaller type, or by less space between the lines. When smaller type or narrower measure or both are employed, the use of quote-marks is unnecessary.

The single quote-mark, consisting of an inverted comma at the beginning and an apostrophe at the close, is used to mark a single word or phrase, or to note a quotation within a quotation.

The fact that no quote-marks are employed in the Bible goes far to prove that their use is not so essential to clearness as has been supposed. Writers, printers, and stenographers are sometimes in doubt whether to place a closing quote-mark before or after a comma, semicolon, or period. The mark must enclose the quoted parts only. If a complete sentence is quoted, the period is placed within the quote-mark; if the quoted words end with a comma, semicolon, or colon, these points usually follow the quote-marks; but if the sentence is a question or an exclamation, the interrogation or exclamation point is enclosed within the marks of quotation.

Quote-marks within quote-marks are sometimes necessary, but these should be avoided so far as possible, especially when several quotations culminate at the close of a sentence. Double quote-marks are usually employed for the first, and single marks for the inclosed quotations.

- 1 The command, "Thou shalt not kill", forbids many crimes besides that of murder.
- 2 Some one has said, "What an argument for prayer is contained in the words, 'Our Father which art in heaven'!"
- 3 "I will mention only such as are the same parts of speech; thus, 'sun' and 'son'; 'reign', 'rain', and 'rein'; 'hair' and 'hare'; 'plate' and 'plait'; 'moat' and 'mote'; 'pair' and 'pear'; 'air' and 'heir'; 'ark' and 'arc'; 'mite' and 'might'; 'pour' and 'pore'; 'veil' and 'vale'; 'knight' and 'night'; 'knave' and 'nave'; 'pier' and 'peer'; 'rite' and 'right'; 'site' and 'sight'; 'aisle' and 'isle'; 'concent' and 'consent'; 'signet' and 'cygnet'."

The third example, from Trench, *English Past and Present*, illustrates the overuse of quotation marks. All of the single quote-marks might safely be omitted. Theodore Low De Vinne, in *The Practice of Typography*, says: "To read line after line bristling with these points is as irritating as a walk through briar-bushes."

FOREIGN WORDS

Foreign words and phrases are usually set in italics, and do not require the quote-marks to indicate their origin. When the foreign words make one or more sentences, it is better to set them in roman with quote-marks.

SEPARATION AND SPACING

When several abbreviated titles as A.M., LL.D., occur at the end of a line, one title may be separated from the rest, but the parts of the same title must not be divided. No space other than that required by the period is necessary.

The form "pages 136, 137" is preferable to "pages 136-7", and the form "pages 139 to 160" is preferred to "pp. 139-160." A period of time covering two successive years may be expressed 1903-4. When the years are not consecutive, write in full, thus: 1897, 1900, 1904. The use of the apostrophe, as '97, '99, '04, is unsightly in books and should be avoided.

un-. The prefix *un-* is used with many words, which, for the most part, are self-explaining. With adjectives, adverbs, and nouns, it usually has a negative force; as, unclean, unfair, unfairly, unthinkingly, uncleanliness, untruth, unwisdom. With verbs, the prefix conveys the sense of reversal; as unsex, undo, unbend, unfold.

The divisions and accents of the words combined with *un-* are the same as when not combined, and as these words are found in their appropriate alphabetic order, it is not deemed necessary to repeat many of them here.

The prefix *un-* is rarely separated from the rest of the word by a hyphen. The principal exceptions are here given.
